REPORTING PERIOD:

October 1, 2017 to December 31, 2017

CONTACTS:

Project Manager: Mr. David W. Swetland, P.G., Converse Consultants, State College, PA
(814-234-3223) (dswetland@conveseconsultants.com)

Owner Contact: Mr. George Korb, Chief Engineer, Woodloch Pines Inc., Hawley, PA
(570) 878-1810

QUARTERLY ACTIVITY SUMMARY:

November 2017: New Heat exchanger installed and system is operational. Quarterly Sampling 11/30/17. Issue with modem resolved.

December 2017: Influent air sample taken 12/28/17. System down at end of month due to power failure that lead to frozen pump.

ON-GOING FIELD ACTIVITIES:

Well Gauging:	Twice per month for area of treatment cell (during operation). Quarterly for other monitoring wells.
Manual Bailing for Product Recovery:	No product present during quarterly monitoring.
Groundwater Sampling:	Quarterly.
Remedial System Operation & Maintenance:	DPE System shut down to allow modifications then re-started on 11/30/17. See REMEDIATION SYSTEM below.
Additional Activities:	See below for all activities.

QUARTERLY GROUNDWATER SAMPLING DATA SUMMARY:

Groundwater Sampling Date(s):	November 30 th and December 1 st , 2017
Separate Phase Liquid (SPL) Measurement:	Oil/Water Interface Probe.
SPL Thickness:	No SPL measured in any monitoring well.
SPL Recovery Amounts: Quarterly/Cumulative Total to Date:	0.0/0.0
Groundwater Sampling Methods:	Low-flow purge method
Monitoring Wells Sampled:	MW-1R through MW-22 (except MW-6 that was previously destroyed, MW-11, MW-12, and MW-16 had surface obstructions, and MW-13 was dry).
Recovery Wells Sampled:	None
Laboratory Analysis:	PADEP 2008 Unleaded Gasoline Short List Compounds.
Groundwater Sample Results:	See comments below, Appendix B: Table 2, and trend graphs.
Depth to Groundwater:	1.78 feet (MW-22) to 14.97 (MW-14) feet below top of casing. (see Table 1).
Groundwater Flow Direction:	Radial away from groundwater mounding in the area of MW-5R and MW-3; contaminant transport primarily to the west and southeast (see Figures in Appendix A).

FOURTH QUARTER 2017 REMEDIAL ACTION PROGRESS REPORT
PAUSTIF CLAIM NO. 2011-0082(S)

Hydraulic Gradient: 0.019

Commentary:

Laboratory data for November 2017 indicate a general increase in constituent concentrations of benzene, TMBs, naphthalene, toluene and ethylbenzene in impacted monitoring wells when compared to the previous quarter. As presented on Appendix B: Table 2, compounds of concern (COCs) were identified at concentrations that exceed the RMSC SHSs at the following monitoring wells:

Monitoring Well MW-1R:	1,2,4-TMB (674 µg/L), Benzene (2,910 µg/L), Toluene (1,290 µg/L), MTBE (57 µg/L), Ethylbenzene (1,150 µg/L) Naphthalene (200 µg/L)
Monitoring Well MW-2:	1,2,4-TMB (366 µg/L), Benzene (106 µg/L), Naphthalene (103 µg/L)
Monitoring Well MW-3:	Benzene (29 µg/L), MTBE (227 µg/L)
Monitoring Well MW-4:	1,2,4 TMB (43 µg/L), Benzene (67 µg/L)
Monitoring Well MW-5R:	1,2,4-TMB (1,380 µg/L), Benzene (648 µg/L), Toluene (2,490 µg/L) Ethylbenzene (2,290 µg/L), MTBE (30 µg/L), Naphthalene (387 µg/L)
Monitoring Well MW-7:	1,2,4-TMB (233 µg/L), Benzene (4090 µg/L), MTBE (75 µg/L), Naphthalene (193 µg/L)
Monitoring Well MW-9:	Benzene (27 µg/L)

Contaminant concentrations in peripheral monitoring wells have shown a decreasing trend over the past few quarters. Contaminant concentrations observed in source area monitoring wells in November 2017 were consistent with historical data. As the system was shut down for modifications during the first two months of the quarter, contaminant concentrations within the source area have rebounded. As the volume of water treated by the remedial system is small compared to treatment of vapor, additional time and/or additional drawdown of the water table is still required at this point in time.

Contaminant concentrations in monitoring wells MW-9 and MW-10 showed a spike in concentrations during 2015 and 2016 but have returned to previous low levels now that the treatment system has been in operation.

Water level data indicates a groundwater mound in the area of monitoring wells MW-4 and MW-5R for the 4Q 2017 groundwater sampling event. The groundwater mound is consistent with previous monitoring events. System modifications have been completed to help mitigate the impact of the groundwater mound on the efficiency of the treatment system. It will take 3 to 6 months of treatment system operation to assess the success of the system modifications.

Analyte concentration trend graphs are included in Appendix B.

Variances:

None noted.

REMEDIATION SYSTEM: As documented in the previous quarterly report, Converse completed the installation and testing of the remedial system in December 2016. The dual phase extraction (DPE) remedial system was started on December 29, 2016.

Samples of the influent and effluent groundwater (as well as between the carbon tanks) processed by the DPE are collected on a monthly basis to ensure the functionality of the system. No samples were collected this quarter as the system was offline during October and November and the pump was frozen when the sampling team arrived

FOURTH QUARTER 2017 REMEDIAL ACTION PROGRESS REPORT
PAUSTIF CLAIM NO. 2011-0082(S)
FORMER ROSEMERGY'S GARAGE/STORE PROPERTY
NOW THE MARKET AT WOODLOCH
1623 STATE ROUTE 590
LACKAWAXEN TWP., PIKE COUNTY, PENNSYLVANIA

at the end of December to collect the samples. Historic data is summarized on the attached Table 3.

During the Fourth quarter of 2017 the system treated approximately 29,550 gallons of impacted groundwater during 27 days of operation. System downtime included waiting for a replacement heat exchanger and motor, a power outage, and waiting for replacement pump.

Operating Period: October 1, 2017 through December 31, 2017

System Operating Time: 648 hours or 27 days (total run time)

Total Water Treated: ~29,550 gallons

Average Water Flow Rate: 0.76 gpm

Total Vapor Treated: 13,996,800 scf

Average Vapor Flow Rate: 360 scfm

Estimated Total Liquid Phase Contaminants Removed: .064 lbs of COC_c

Estimated Total Vapor Phase Contaminants Removed: 98.4 lbs of weathered gasoline

SPL Recovered: 0 gallons

Liquid Phase Carbon Disposed: 0 lbs (No carbon changeout)

Vapor Phase Carbon Disposed: 0 lbs (No carbon changeout)

Calculation of liquid phase contaminants treated is based on the average total influent concentration of COCs of 258 ug/l and the total gallons treated of approximately 29,550 gallons.

Calculation of vapor phase contaminants is based on an average PID reading of 24.6 units of weathered gasoline in the treatment influent, a ppmV for weathered gasoline of 4.62 mg/m³, and the shown volume of vapor treated for the quarter. In future, calculation of the vapor phase contaminants will be based on the analysis of the influent air samples collected during each quarter. As the samples collected on December 28, 2017 were obtained after the pump had shut down and the system was idle the results are not considered to be representative for the quarter.

The total DPE system airflow rate is measured by a direct read ERDCO flow meter when the flow is less than 350 cfm. When the system operates above 350 cfm the flow rate can be estimated from the operation curves for the Roots blower. The average flow rate was 360 cfm.

SYSTEM DRAWDOWN: During remedial system operation Converse has monitored water levels in the treatment cell to assess the drawdown created by the DPE. As discussed in previous quarterly reports, quarterly groundwater contour maps have shown a groundwater depression in the northwest corner of the treatment cell due to operation of the remedial system. However, the drawdown has not been sufficient to cause significant drawdown throughout the treatment cell. The current system is shut down while it is reconfigured to provide the maximum drawdown that is available for the current equipment. After the system is re-started it will be monitored for several months to assess whether additional measures will be needed to provide the required drawdown.

Vacuum leaks in the southeast corner of the treatment cell at extraction points MW-4 and DPE-3 and parking lot runoff issues were addressed to maximize drawdown. The water levels will need to be monitored for several consecutive months of operation before any conclusions can be reached on the drawdown provided by the current remedial system configuration. Provided that the system runs for the majority of the winter months, new drawdown data should be available in the 1Q 2018.

Converse assumes that the water levels in the extraction wells during dual phase extraction are at 12.5 feet below grade which is the depth of the DPE system drop-pipes. Water levels taken shortly after a wellhead is turned off generally verify this assumption, although the water level in the wells begins to rise immediately after the wellhead is shut off and a small rise above the bottom of the drop pipe is always observed at the time of water level collection.

SYSTEM VACUUM: During remedial system operation Converse monitors system vacuum in the shed and at the well heads. Since March of 2017, Converse has collected additional vacuum data from the monitoring points in the treatment cell in an attempt to measure the extent of vacuum influence. See the attached Remediation Tables in Appendix B for the measured values.

The remediation system typically operates at a vacuum of 9 to 14.5 inches of mercury (inHg). Vacuum measured at the DPE well heads should typically exceed 80 inches of water column (IWC). Vacuum levels at the well heads have been sufficient to simultaneously extract water and soil vapor from each of the DPE well heads, however during the winter months several wellheads display sub-optimal vacuum readings. During 2017, the wellhead vacuums showed significant improvement during the late Spring and Summer. After the prolonged system shutdown to reconfigure the treatment system, we expect that it will again take several months to see optimal vacuum at the wellheads. Analyzing the historical vacuum data at the wellheads it appears that the vacuum readings are influenced by sub-freezing temperatures and by periodic collection of readings too soon after the system is re-started.

Rehabilitation of the DPE well heads DPE-3 and MW-4 was completed in October.

VAPOR TREATMENT: Soil vapor is currently being treated by the use of multiple vapor phase GAC units which were installed in November 2017.

NOISE REDUCTION ACTIVITIES: On June 7, 2017 Converse installed sound reduction materials inside the DPE manholes. The materials were required to meet noise standards within the nearby market building. The measures have reduced noise levels in nearby offices located in the market building.

PLANNED ACTIVITIES:

Well Gauging:	March 2018
Manual Bailing for Product Recovery:	Not planned
Groundwater Sampling:	March 2018.
Remedial System Operation & Maintenance:	At least twice per month during operation
Remedial System Sampling Date(s):	Monthly
Additional:	Analysis of an influent air sample at least once per quarter. Additional remedial measures to increase drawdown will be evaluated.

NOTES:

The Fourth Quarter 2017 hydraulic gradient was calculated using the groundwater elevation at monitoring well MW-3 (1294.18 feet) minus the groundwater elevation at monitoring well MW-22 (1289.70 feet) divided by the horizontal distance (~240 feet) from monitoring well MW-3 to monitoring well MW-22.

(2) = Diameter of Well Casing in Inches.

TWD = Total Well Depth in feet below grade.

SI = Screened Interval in feet below grade.

TOCG = Top of Well Casing relative to Grade.

+ = Approximate feet above grade.

- = Approximate feet below grade.

TOC = Top of Well Casing.

NI = Not Installed

DTW = Measured Depth to Groundwater from TOC.

GW ELEV = Calculated Groundwater Elevation.

NM = Well not measured.

NA = Not Applicable.

IA = Inaccessible.

NS = Not Sampled.

AB = Abandoned or Destroyed

*= See chain on custody for specific well dates

Definitions

If surrogate values are not within the indicated range, then the results are considered to be estimated.

Reporting limits are adjusted accordingly when samples are analyzed at a dilution due to the matrix.

MBAS, calculated as LAS, mol wt 348

If the solid sample weight for VOC analysis does not fall within the 3.5-6.5 gram range, the results are considered estimated values.

Unless otherwise noted, all results for solids are reported on a dry weight basis.

Samples collected by Fairway Laboratories' personnel are done so in accordance with Standard Operating Procedures established by Fairway Laboratories.

The following analyses are to be performed immediately upon sampling: pH, sulfite, chlorine residual, dissolved oxygen, filtration for ortho phosphorus, and ferrous iron. The date and time reported reflect the time the samples were analyzed at the laboratory; and should be considered as analyzed outside the EPA holding time.

^ The following analytes are to be filtered immediately upon sampling: Hexavalent Chromium. Filtration through a 0.45 micron filter within 15 minutes of sampling is required for compliance with the Clean Water Act (CWA) for reporting of hexavalent chromium to prevent interconversion of chromium species.

* P indicates analysis performed by Fairway Laboratories, Inc. at the Pennsdale location. This location is PaDEP Chapter 252 certified.

* G indicates analysis performed by Fairway Laboratories, Inc. at the Greensburg location PaDEP: 65-00392. This location is PaDEP Chapter 252 certified.

< Represents "less than" - indicates that the result was less than the reporting limit.

MDL Method Detection Limit - is the lowest or minimum level that provides 99% confidence level that the analyte is detected. Any reported result values that are less than the RL are considered estimated values.

RL Reporting Limit - is the lowest or minimum level at which the analyte can be quantified.

[CALC] Indicates a calculated result. Calculations use results from other analyses performed under accredited methods.

Terms & Conditions

Services provided by Fairway Laboratories Inc. are limited to the terms and conditions stated herein, unless otherwise agreed to in a formal contract.

CHAIN OF CUSTODY Fairway Laboratories Inc. ("Fairway," "us" or "we") will initiate a chain-of-custody/request for analysis upon sample receipt unless the client includes a completed form with the received sample(s). Upon request, Fairway will provide chain-of-custody forms for use.

CONFIDENTIALITY Fairway maintains confidentiality in all of our client interactions. The client's consent will be required before releasing information about the services provided.

CONTRACTS All contracts are subject to review and approval by Fairway's legal council. Each contract must be signed by a corporate officer.

PAYMENT/BILLING Unless otherwise set forth in a signed contract or purchase order, terms of payment are "NET 30 Days." The time allowed for payment shall begin based on the invoice date. A 1.5% per month service charge may be added to all unpaid balances beyond the initial 30 days. In its sole discretion, Fairway reserves the right to request payment before services and hold sample results for payment of due balances. We will not bill a third party without prior agreement among all parties acknowledging and accepting responsibility for payment.

SAMPLE COLLECTION AND SUBMISSION Clients not requesting collection services from Fairway are responsible for proper collection, preservation, packaging, and delivery of samples to the laboratory in accordance with current law and commercial practice. Fairway shall have no responsibility for sample integrity prior to the receipt of the sample(s) and/or for any inaccuracy in test or analyses results as a result of the failure of the client or any third party to maintain the integrity of samples prior to delivery to Fairway. All samples submitted must be accompanied by a completed chain of custody or similar document clearly noting the requested analyses, dates/time sampled, client contact information, and trail of custody. Samples received at the laboratory after business hours are verified on the next business day. Discrepancies are documented on the Receiving Document.

SUBCONTRACTING Some analyses may require subcontracting to another laboratory. Unless the client indicates otherwise, this decision will be made by Fairway. Subcontracted work will be identified on the final report in accordance with NELAC requirements.

RETURN OF RESULTS Fairway routinely provides faxed or verbal results within 10 working days of receipt of sample(s) and a hard copy of the data results is routinely received via US Postal Service within 15 working days. At the request of the client, Fairway may offer expedited return of sample results. Surcharges may apply to rush requests. All rush requests must be pre-approved by Fairway. We reserve the right to charge an archive retrieval fee for results older than one (1) year from the date of the request. All records will be maintained by Fairway for 5 years, after which, they will be destroyed.

SAMPLE DISPOSAL Fairway will maintain samples for four (4) weeks after the sample receipt date. Fairway will dispose of samples which are not and/or do not contain hazardous wastes (as such term is defined by applicable federal or state law), unless prior arrangements have been made for long-term storage. Fairway reserves the right to charge a disposal fee for the proper disposal of samples found or suspected to contain hazardous waste. A return shipping charge will be invoiced for samples returned to the client at their request.

HAZARD COMMUNICATION The client has the responsibility to inform the laboratory of any hazardous characteristics known or suspected about the sample, and to provide information on hazard prevention and personal protection as necessary or otherwise required by applicable law.

WARRANTY AND LIMITATION OF LIABILITY For services rendered, Fairway warrants that it will apply its best scientific knowledge and judgment and to employ its best level of effort consistent with professional standards within the environmental testing industry in performing the analytical services requested by its clients. We disclaim any other warranties, expressed or implied by law. Fairway does not accept any legal responsibility for the purposes for which client uses the test results.

LITIGATION All costs associated with compliance to any subpoena for documents, for testimony in a court of law, or for any other purpose relating to work performed by Fairway Laboratories, Inc. shall be invoiced by Fairway and paid by client. These costs shall include, but are not limited to, hourly charges for the persons involved,

Fairway Laboratories, Inc.

Fairway Labs in Altoona, PA is a NELAP (National Environmental Laboratory Accreditation Program) accredited lab, and as such, certifies that all applicable test results meet the requirements of NELAP, unless otherwise stated on the analytical report.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.
