1.0 Site Characterization Report Summary

The purpose of this *Site Characterization Report (SCR)* and a brief Site history are presented in the following sections:

1.1 Purpose

Synergy Environmental Inc. (Synergy) was retained by Gatz Automotive, Inc. (Gatz Auto) to complete Site characterization activities for the facility located at 2899 Holme Avenue in Philadelphia, Philadelphia County, Pennsylvania (the "Site"). On August 7, 2023, a static test of underground storage tank (UST) 003 was conducted in response to a Veeder Root leak alarm. The tank failed a static test and arrangements were made to remove the product down to 1/16th of an inch. During January 25 and 26, 2024 the three USTs at the Site were closed and removed. Analytical results from the UST closure activities indicated exceedances of the Non-Residential Statewide Health Standard (NRSHS) in Site soil. Initial Site characterization was conducted by Marshall Geosciences (Marshall). Synergy acquired the responsibility for the environmental investigation at the Site on March 25, 2024. Site characterization tasks conducted to date include the advancement of twelve soil borings resulting in the collection of seventeen soil samples to characterize and delineate soil impacts. Additionally, eight monitoring wells have been installed at the Site to assess groundwater conditions and delineate petroleum impacted groundwater.

This *Site Characterization Report under the Statewide Health Standard* for soil and groundwater is prepared for Gatz Auto for a release of unleaded gasoline that was confirmed following the failed static test of UST 003 in August 2023. The location of the Site is identified on **Figure 1**. This report documents the identified impacts to Site soil and groundwater because of a petroleum release. It is submitted to the Pennsylvania Department of Environmental Protection (PADEP) in accordance with 25 PA Code Chapter 245 (Administration of the Storage Tank and Spill Prevention Program) and is in compliance with Section 904(c) of 25 PA Code Chapter 250 (Administration of the Land Recycling Program).

According to 25 PA Code § 250.1, a "Site" is defined as "the extent of contamination originating within the property boundaries and all areas in close proximity to the contamination necessary for the implementation of remediation activities to be conducted under the act". Throughout this report, the term "Site" will be used strictly under this definition. Unless otherwise specified, all analytical results are compared to Residential and Non-Residential Statewide Health Standards (NRSHS), as presented in 25 PA Code Chapter 250, Appendix A.

1.2 Brief Site History

The subject property currently operates as an automotive repair garage located at 2899 Holme Ave. in Philadelphia, Philadelphia County, Pennsylvania. The Site is located in an area of mixed residential and commercial property usage.

The underground storage tank (UST) system at the Site at the time of the release consisted of three 8,000-gallon gasoline USTs. All three 8,000-gallon gasoline USTs were located in a shared tank pit located to the south of the gasoline dispensers and canopy. Reportedly, the 8,000-gallon gasoline USTs were installed during March 1982.

The USTs were single walled fiberglass construction. Three multi-product gasoline dispensers were located under a canopy to the south of the automotive repair garage. According to documents available for review, two other USTs in addition to this system have been installed at the Site including one 550-gallong heating oil UST and one 550-gallon waste oil UST. These two USTs are listed as removed or closed. A Detailed Site Map is included as **Figure 2**.

2.0 Site Description

The following sections are provided to describe the environmental setting at the Site and surrounding area. **Figure 1** depicts the Site location on the 7.5-minute USGS Frankford, Pennsylvania topographic quadrangle map.

2.1 Description and Site Use

The Site consists of one parcel encompassing approximately 0.41 acres. The Site is located at 2899 Holme Avenue in Philadelphia, Philadelphia County, Pennsylvania. The Site is currently developed and operated as an auto repair garage. The Site consists of one approximately 2,800 square foot office building with an attached auto repair garage. A canopy which previously sheltered three gasoline dispensers is located to the south of the auto repair garage. A Site Map is provided as **Figure 2** which identifies the locations of various Site features.

The following public utilities are located at and in the immediate vicinity of the Site: electric, telephone, municipal water and sanitary sewer. This includes both overhead and underground utilities. The depth of the utilities at the Site is unknown, however utilities are typically found three to five feet below ground surface. Potable water is supplied to the Site and immediate surrounding area by the Philadelphia Water Department.

2.2 Surrounding Properties

Land use in the surrounding area consists mixed of commercial and residential properties. Surrounding properties consist of the following:

Direction From Site	Surrounding Properties
North:	Commercial properties to the immediate north with residential apartment buildings beyond.
East:	Welsh Road borders the Site to the east. Commercial properties are located beyond.
South:	Holme Avenue and Holme Circle border the Site to the south. Residences and commercial properties are located beyond.
West:	Commercial properties border the Site to the west. Residential properties are located beyond.

2.3 Geographic Setting

The Site is located on the *USGS Frankford, Pennsylvania 7.5 Minute Topographic Quadrangle Map* at approximately 40.056611 north latitude and -75.029028 west longitude (**Figure 1**). According to the contour lines on the topographic map, the Site is located at an elevation of approximately 113 feet above mean sea level (msl). The nearest surface water body is Pennypack Creek, which is located approximately 2,050 feet west of the Site and flows south into the Delaware River. The Delaware River is located approximately 2.25 miles south of the Site.

2.4 Nature and Extent of Release

On August 7, 2023, a static test of UST 003 was conducted in response to a Veeder Root leak alarm. The tank failed the static test and arrangements were made to remove the product down to 1/16th of an inch. The three USTs were removed on January 25, 2024 and the release was confirmed when a circumferential crack in the north end of Tank 003 was noted and impact was observed in the soil. Sampled collected beneath UST003 returned soil impacts above NRSHS.

The PADEP was verbally notified of a reportable release on August 15, 2023. A written Notification of Reportable Release (NORR) was submitted to the PADEP on January 27, 2024 with regard to the discovery of a circumferential crack in UST 003 and impacted soils beneath the tank during tank closure activity. The NORR is included as **Appendix A**. Localized soil impact was identified and removed during UST excavation and post-excavation soil samples were collected. Further soil impact was identified in the post-excavation soil samples collected beneath UST 003.

2.5 Site Soils

The United States Department of Agriculture National Resources Conservation Service Web Soil Survey was consulted for information on the soils of the Site. Based on this source, the soil series at the Site was identified as Urban Land, 0 to 8 percent slopes. Urban land consists of soils which have been mixed and comingled by human activities and can no longer be classified further into individual soil series. Urban land is typically covered with structures, parking lots, roadways, or other man-made features.

2.6 Site Geology

The Site is situated within the Pensauken and Bridgeton Formations. This formation consists of dark reddish-brown, cross-stratified, feldspathic quartz sand and some thin beds of fine gravel and rare layers of clay or silt. According to the *Atlas of Preliminary Geologic Quadrangle Maps of Pennsylvania* (Pennsylvania Topographic and Geologic Survey, 1980), the Site is underlain by the Wissahickon Formation, which consists primarily of an oligoclase-mica schist. A geologic area map is included as **Figure 3**.

Based on site characterization activities performed at the Site, the unconsolidated deposits beneath the Site are composed primarily of feldspathic sands. The Site appears to be underlain with gray schist.

2.7 Site Hydrogeology

A layer of weathered rock was encountered between 32 and 36 feet bgs in the vicinity of MW-7 and MW-8. This may act as a partially confining layer for the aquifer. Water appears to have been encountered during drilling at the approximate depth as it is observed in the constructed well. Based on groundwater gauging data collected to date, static groundwater is generally encountered at depths between 35 feet and 38 feet bgs. The horizontal groundwater gradient appears to be to the west-southwest across the Site. The average horizontal groundwater gradient across the Site is approximately 0.0025 feet/feet.

3.0 Site Characterization Activities

Synergy Environmental Inc. (Synergy) acquired the responsibilities for the environmental investigation from Marshall Geosciences (Marshall) to complete Site characterization activities for the Site. As noted previously, soil impacts above respective Statewide Health Standards were identified during UST closure sampling. Following the reporting of the release, Site characterization activities conducted by Synergy have included the advancement of 12 soil borings resulting in the collection of 17 soil samples for laboratory analysis to assess soil conditions. Eight monitoring wells have been installed at the Site to identify and delineate petroleum impacted water. The following sections describe activities conducted at the Site to date.

3.1 Initial Response

UST removal activities were overseen by Marshall Geoscience, Inc. Impacted soils of this release were identified and removed during UST removal activities. Localized impact was observed in the area of soil underneath the north end of UST 003. Approximately 57 tons of impacted soils were excavated and disposed of during these activities. All UST components were closed and removed with no replacement, so the source of gasoline impact was removed from the Site. The property no longer participates in retail gasoline sales. The UST Closure Report by Marshall is included in **Appendix B**.

3.2 Soil Boring Investigation and Soil Sampling

3.2.1 August 2024 Soil Investigation

Synergy mobilized to the Site during August 16, 2024 to conduct an initial soil boring investigation to delineate and assess soil conditions at the Site. Proposed soil boring locations were selected based upon the initial release at the north end of UST 003. Prior to the advancement of the soil borings, an air knife and vacuum were utilized to pre-clear boring locations to verify the absence or presence of underground utilities within the first 5 feet of each boring location prior to the advancement of the borings. Soil was collected using a direct push truck-mounted geoprobe. A total of 6 soil borings (24-SB-1 through 24-SB-6) were advanced during the investigation. Each boring was advanced until equipment refusal or to a depth of 20 feet bgs if no evidence of impact is observed. For each boring, the recovered soils were screened with a photoionization detector (PID), inspected for visual or olfactory indications of petroleum contamination, and classified by Synergy field personnel. Samples were selected for laboratory analysis based upon PID screening results, field observations, or the soil's location relative to the initial impact.

A total of 6 samples were collected and submitted to ALS Global Laboratories of Middletown, Pennsylvania for analysis of PADEP unleaded gasoline new list parameters including: benzene, toluene, ethylbenzene, total xylenes, methyl tert-butyl ether, naphthalene, isopropylbenzene (cumene), 1,2,4 – trimethylbenzene (TMB), and 1,3,5 – TMB via EPA Method 8260C. The samples were placed in laboratory provided bottleware, labeled, and placed in a cooler packed with ice and maintained at a temperature of approximately 4˚ Celcius. Soil analytical results from the August 2024 soil investigation are summarized in **Table 1**. Soil sample locations are depicted on **Figure 4**. The laboratory analytical report is included in **Appendix C**. Analytical results from the August 2024 soil investigation are discussed in **Section 3.2.3.**

3.2.2 November 2024 Soil Boring Investigation

During November 4-5, 2024, Synergy returned to the Site and advanced 6 additional soil borings (24-SB-7 through 24-SB-12). The locations of the soil borings were selected based upon the analytical results from the previous soil boring event conducted during August 2024. Prior to the advancement of the soil borings, an air knife and vacuum were utilized to pre-clear boring locations to verify the absence or presence of underground utilities within the first 5 feet of each boring location. Soil was collected using a direct push truck-mounted geoprobe. Each boring was advanced until equipment refusal or to a depth of 20 feet bgs if no evidence of impact is observed. For each boring, the recovered soils were screened with a photoionization detector (PID), inspected for visual or olfactory indications of petroleum contamination, and classified by Synergy field personnel. Samples were selected for laboratory analysis based upon PID screening results, field observations, or the soil's location relative to the previously identified impact.

A total of 11 samples were collected and submitted to ALS Global Laboratories of Middletown, Pennsylvania for analysis of PADEP unleaded gasoline new list parameters for this round of soil sampling. The samples were placed in laboratory provided bottleware, labeled, and placed in a cooler packed with ice and maintained at a temperature of approximately 4˚ Celcius. Soil analytical results from the November 2024 soil investigation are summarized in **Table 1**. Soil sample locations are depicted on **Figure 4**. The laboratory analytical report is included in **Appendix D**. Analytical results from the November 2024 soil investigation are discussed in **Section 3.2.3.**

3.2.3 Soil Analytical Results

Soil analytical results from the soil boring investigation samples are presented below.

Soil Boring Investigation Sampling Results - Exceedances of NRSHS

Soil analytical results from the August 2024 soil boring investigation indicated that one of the six samples collected during the event reported at least one parameter in exceedance of a respective NRSHS. Analytical results indicated exceedances of benzene, toluene, and ethylbenzene in 24-SB-1. Benzene was detected exceeding the NRSHS (0.5 mg/kg) with a concentration of 5.56 mg/kg. Toluene was detected exceeding the NRSHS (100 mg/kg) with a concentration of 183 mg/kg. Ethylbenzene was detected exceeding the NRSHS (70 mg/kg) with a concentration of 70.5 mg/kg. The locations and analytical results of the August 2024 soil boring investigation are shown on **Figure 4**. Analytical results for the soil samples collected during the soil boring investigation are summarized on **Table 1**. The analytical laboratory report is attached as **Appendix C**.

Soil analytical results from the November 2024 soil boring investigation indicated that none of the six borings identified any target parameters in exceedance of NRSHS. The locations and analytical results of the November 2024 soil boring investigation were selected to delineate impacts from the August 2024 soil sampling event and are shown on **Figure 4**. Analytical results for the soil samples collected during the soil boring investigation are summarized on **Table 1**. The analytical laboratory report is attached as **Appendix D**.

3.3 Groundwater Investigation

The following sections describe the tasks completed as part of the groundwater investigation conducted at the Site.

3.3.1 Monitoring Well Installation

Following the identification of soil impact at refusal, monitoring wells were installed to identify groundwater impacts at the Site. During November 6-7, 2024, four monitoring wells were installed under Synergy supervision. Monitoring wells MW-1 through MW-4 were installed utilizing an air rotary drill rig and completed as a 2-inch PVC wells. Each well was completed to a depth of approximately 50 feet below ground surface with 30 feet of 0.010 slot screened PVC and 20 feet of solid PVC riser to the surface. Each well was finished within a protective manway and concrete well pad and secured with locking well caps.

During February 24 - 25, 2025, four additional monitoring wells were installed under Synergy supervision. The additional monitoring wells were required to characterize groundwater impacts identified in the previously installed monitoring wells. Monitoring wells MW-5 through MW-8 were installed utilizing an air rotary drill rig. These wells were also installed to depths of approximately 50 feet bgs with 25 feet of 0.010 slot screened PVC. Well logs are included as **Appendix E**. **Figure 2** depicts the monitoring well locations.

3.3.2 Groundwater Sampling

Five rounds of groundwater samples have been conducted at the Site since Site characterization was initiated. Synergy conducted groundwater sampling activities during November 22, 2024, December 13, 2024, and January 17, 2025 for the original monitoring well network of MW-1 through MW-4. Synergy also conducted groundwater sampling activities during March 13, 2025 and April 9, 2025 for the complete monitoring well network of MW-1 through MW-8. Groundwater samples collected at the Site have been analyzed for Pennsylvania unleaded gasoline (new list) (PAUG) short list target parameters including: benzene, toluene, ethylbenzene, total xylenes, MTBE, isopropylbenzene (cumene), naphthalene, 1,2,4-TMB, and 1,3,5-TMB

During groundwater sampling events, the monitoring wells were gauged and the depth to water and total depth of each well were measure with an oil/water interface probe capable of measuring water and/or LNAPL to within 0.01 feet. The interface probe was decontaminated between each well using Alconox and distilled water to avoid potential cross-contamination. Following gauging, volumetric measurements were calculated and the wells were purged through granular activated carbon units.

Following purging, samples were collected using a dedicated polyethylene bailer and string. The bailer was slowly lowered into the well for sample collection to avoid the potential for sample volatilization. The groundwater collected within the bailer was then transferred to laboratory provided bottleware. The sample bottleware contained hydrochloric acid (HCl) as a preservative. Samples were labeled and immediately placed in an ice packed cooler maintained at approximately 4˚ Celcius. The samples were dropped off at an associated ALS service center. The samples were handled under typical chain-of-custody procedures from the time of sample through analysis at the laboratory. The two most recent groundwater sampling events of the full monitoring well network are described below.

3.3.2.1 March 13, 2025 Sampling Event

Monitoring wells MW-1 through MW-8 were gauged, purged and sampled as part of this sampling event. Depth to groundwater measurements ranged from 35.94 (MW-8) feet to 38.13 (MW-6) feet from top of casing. Groundwater elevations ranged from 72.99 (MW-6) to 73.23 (MW-1). LNAPL was not detected in any of the monitoring wells. Groundwater flow was determined to be towards the west-southwest with a gradient of 0.0025 ft/ft based upon gauging data. Groundwater analytical results are discussed in **Section 3.4.2**.

Figure 5 shows the groundwater contours and flow direction for the sampling event. **Figure 6** depicts the groundwater analytical data for this sampling event. Groundwater gauging and analytical data are summarized on **Table 2**. The analytical laboratory report from the groundwater sampling event is attached as **Appendix F**.

3.3.2.2 April 9, 2025 Sampling Event

Monitoring wells MW-1 through MW-8 were gauged, purged and sampled as part of this sampling event. Depth to groundwater measurements ranged from 36.22 (MW-8) feet to 38.34 (MW-6) feet from top of casing. Groundwater elevations ranged from 72.78 (MW-6) to 73.02 (MW-1). LNAPL was not detected in any of the monitoring wells. Groundwater flow was determined to be towards the west with a gradient of 0.0025 ft/ft based upon gauging data. Groundwater analytical results are discussed in **Section 3.4.2**.

Figure 7 shows the groundwater contours and flow direction for the sampling event. **Figure 8** depicts the groundwater analytical data for this sampling event. Groundwater gauging and analytical data are summarized on **Table 2**. The analytical laboratory report from the groundwater sampling event is attached as **Appendix G**.

3.4 Results of Site Characterization Study

The following sections detail the results of the Site characterization activities performed at the Site:

3.4.1 Soil Quality

The two soil boring investigations conducted at the Site to date have indicated that soil impact was identified at one location in 24-SB-1. The impact in 24-SB-1 was noted at 17.5 to 18 feet bgs. Refusal was encountered at 18 feet bgs, so a deeper soil sample could not be obtained in that soil boring. Benzene, toluene and ethylbenzene have all been detected in exceedance of their respective NRSHS. The identified soil impact at 24-SB-1 is located in the vadose zone with the first water table encountered around 35 feet bgs. A number of soil borings were advanced around 24-SB-1 in order to delineate the identified impact, but all samples returned all gasoline parameters below NRSHS. **Table 1** provide the analytical result summaries from each soil sampling event. **Figure 4** depicts a comprehensive view of sampling locations and soil sampling analytical results for samples collected to date. Analytical laboratory reports are included as **Appendices C** and **D**.

3.4.2 Groundwater Quality – Exceedances of the NRSHS

Five groundwater sampling events have been conducted at the Site since characterization activities were initiated. The initial sampling event was conducted during November 22, 2024. The following exceedances were reported for this sampling event:

- MW-1: benzene (203 µg/L)
- MW-2: benzene (20.2 µg/L) and MTBE (22.1 µg/L)

In the four groundwater sampling events that have occurred since this initial event, benzene has been identified above NRSHS in MW-3 and there has been one detection of benzene above NRSHS in MW-4, which has not been replicated. No LNAPL has been identified at the Site in any of the groundwater sampling events conducted to date.

After three groundwater sampling events of MW-1 through MW-4, an additional four wells (MW-5 through MW-8) were installed at the Site to address groundwater impact delineation. There have not yet been detections of PAUG parameters above NRSHS in these additional wells. **Figures 5** through **8** depict the groundwater analytical summary for the most recent two sampling events at the Site. Groundwater gauging and analytical data are summarized on **Table 2**.

4.0 Vapor Intrusion Evaluation

A vapor intrusion screening of the Site was conducted. The following sections detail the vapor intrusion evaluation. For this evaluation, The PADEP Vapor Intrusion Guidance Manual, document 261-0300-100, effective March 27, 2021 (guidance) was utilized to assess potential vapor intrusion.

4.1 Soil Evaluation

Soil analytical data collected to date indicted benzene, toluene, ethylbenzene, total xylenes, naphthalene, 1,2,4-TMB, and 1,3,5,TMB present in Site soil above their respective SHS Vapor Intrusion Soil Screening Values. The guidance states that the vertical proximity distance is five feet and the horizontal distance is 30 feet for adsorbed phase contamination. The nearest exceedance to the occupied auto garage is 24-SB-1, which is located 17.5 feet below ground surface and 50 horizontal feet from the garage. Therefore, the soil exceedances above the Vapor Intrusion Soil Screening Values would not represent a potential source of vapors to the onsite building. Evaluation of analytical collected to date and the use of the proximity distances presented within the guidance indicated Site soil does not present a vapor intrusion risk at this time. Since the exceedances observed in Site soil are either at depths greater than 5 feet (with acceptable soil material above) and/or greater than 30 feet from the Site building, there is adequate distance for biodegradation to occur to reduce concentrations to acceptable levels.

4.2 Groundwater Evaluation

From the groundwater analytical data collected to date, only benzene has historically been detected at concentrations in exceedance of its respective Groundwater SHS Vapor Intrusion Screening Value in MW-1 and MW-3. The guidance states that the vertical proximity distance for petroleum-impacted groundwater is 5 feet. The shallowest depth to groundwater measurement collected during gauging was 35.02 feet below top of casing. This measurement was the shallowest any groundwater was identified within a Site well. Therefore, due to the vertical distance to the petroleum impacted groundwater, the vertical proximity distance would indicate there is adequate distance for biodegradation to occur to reduce concentrations to acceptable levels. Additionally, no exceedances of groundwater screening values or LNAPL have been noted to date within 30 feet of the Site building. Therefore, based on the analytical data collected to date, Site groundwater does not present a vapor intrusion risk at this time.

4.3 Vapor Intrusion Conclusion – Not A Concern

Based upon the soil and groundwater analytical data collected to date and review of the PADEP Vapor Intrusion Guidance Manual, conditions do not currently exist at the Site that would warrant a vapor intrusion investigation. These conditions along with evaluation of offsite vapor receptors will continue to be evaluated as the investigation at the Site progresses.

5.0 Sensitive Receptor Survey

Reconnaissance of the Site and surrounding area includes: the locations of surface water bodies, utilities and other potentially sensitive receptors. The results of the reconnaissance are as follows:

- The existing structure onsite does contain a basement under the auto repair building.
- Several residential properties are located near, but not adjacent, to the Site.
- The nearest surface water body is Pennypack Creek (downgradient) located approximately 2,050 feet miles west of the Site and flows generally southward toward the Delaware River.

Public water is provided to the Site and surrounding area by The Philadelphia Water Department.

5.1 Ecological Screening Process - Soil

Soil analytical data indicates exceedances of the NRSHS for several target compounds. However, the Site is covered by buildings and pavement that eliminate direct contact exposure to any impacted soils. In addition, impacted material has generally been identified at depths of 16 feet or greater below surface as soils above that location were excavated during UST removal.

Based on this information, direct contact to impacted soil is not considered an exposure pathway, and no further evaluation is required.

5.2 Groundwater

Surface waterways are located downgradient from the Site based the groundwater flow direction calculated from the quarterly groundwater sampling events. Surface water is not present on the Site and the nearest downgradient waterbody is approximately 2,050 west of the Site. Groundwater analytical data has identified target compounds exceeding the NRSHS. Based on the analytical data collected to date and the Fate and Transport analysis in **Section 7.0**, it does not appear like that compounds exceeding the NRSHS will migrate off-site. Surface water bodies are not anticipated to impacted by the release at the Site.

Based on this information, surface water is not considered an exposure pathway. Further evaluation, through the installation of off-site monitoring wells if access can be granted, is required to determine if petroleum impacts have migrated past the property boundaries.

5.3 PADCNR Pennsylvania Groundwater Information System

A database search was conducted on Pennsylvania Ground Water Information System (PAGWIS) accessed through the PaGEODE webservice for a half a mile radius from the site and six wells were identified outside of the Site. Five of the wells were designated as monitoring and one was designated as destroyed. It is not anticipated that any of the neighboring wells will be impacted by the Site. A PAGWIS summary is included in **Table 3**.

5.4 Pennsylvania Natural Diversity Inventory Review

To further evaluate the potential for sensitive subpopulations in the vicinity of the Site, a Pennsylvania Natural Diversity Inventory (PNDI) project environmental review was conducted. The search did not identify species of concern listed under the Endangered Species Act of 1973, the Wild Resources Conservation Act, or the PA Game and Wildlife Code within 2,500 feet of the Site. The results are pending further review at the time of this submission by the PA Fish and Boat Commission. The results from the PNDI search are included as **Appendix H**.

6.0 Interim Remedial Activities

UST removal activities were overseen by Marshall Geoscience, Inc. Impacted soils of this release were identified and removed during UST removal activities. Localized impact was observed in the area of soil underneath the north end of UST 003. Approximately 57 tons of impacted soils were excavated and disposed of during these activities. All UST components were closed and removed with no replacement, so the source of gasoline impact was removed from the Site. The property no longer participates in retail gasoline sales.

Light non-aqueous phase liquid (LNAPL) has not been encountered at the Site during any of the groundwater sampling events, so no product recovery has been necessary in the monitoring wells at the Site. Synergy will review the possible need for offsite monitoring wells as well as further remedial activities in the Remedial Action Plan to be submitted within 45 days of this report.

7.0 Fate and Transport Analysis

The following sub-sections present the values selected for the various required input parameters, and the results of the modeling exercise.

7.1 Conceptual Site Model

The conceptual model for this Site is that a release occurred from the previous tank system and the release impacted soils and groundwater in the area of the former tank system, immediately south of the remaining canopy.

On August 7, 2023, a static test of underground storage tank (UST) 003 was conducted in response to a Veeder Root leak alarm. The tank failed and the Tanks were taken out of commission and subsequently removed in January 2024. During removal, soil samples collected underneath the USTs indicated petroleum impact under UST 003, which had a circumferential crack in it. Since the USTs have been removed, there is no other source of petroleum substances underground at the Site. Delineation soil samples collected by Synergy have confined the area of soil impact to the initial area underneath UST 003. Soil samples around that area have had concentrations of gasoline parameters below NRSHS.

Synergy proceeded to install four monitoring wells onsite with MW-1 being installed in the same area as the soil boring where impact was identified. Sampling of that initial monitoring well network identified benzene impact in the source well, as well as impact in MW-2 and MW-3, which roughly align along the gradient. MW-3 is upgradient of the source well, MW-1, so impacts to MW-3 appear to be from a separate source. There was also MTBE identified in MW-2, which has not been identified in any other well installed to date. MW-2 is located a significant distance away from the former UST field, which would be a known source of gasoline impact. Four additional wells were installed at the Site to delineate the groundwater impacts identified in the original monitoring well network. None of these additional wells have identified gasoline impacts above NRSHS and the area of impacts appears to be in a line roughly following the gradient from northeast to southwest. No separate phase hydrocarbons have been identified in any of the monitoring wells.

Synergy has evaluated the groundwater data available for the Site. This section discusses the groundwater contaminant fate and transport modeling used to approximate the extent of dissolved phase benzene. Benzene is the most mobile of the constituents of concern at the Site and was therefore used as the most conservative for modeling. MW-1 was chosen to represent the source area since it is located closest to the source area of the former UST field and where soil impacts were identified. At this time, the model described below is conducted as a conservative estimate using worst-case-scenario data. The source concentration used is the highest concentration of benzene detected during the Site Characterization period. Additionally, the model assumes a constant source of the impact, while the source of the impact at the Site has been removed with the complete closure and removal of the UST system. It is not a calibrated model and is being viewed as an estimation tool.

7.2 Model Description

Quick Domenico (QD) was used to calculate the distance and concentrations of dissolved organic constituents over a 30-year period to estimate the extent of contaminant transport for

contaminants in groundwater. The QD model assumes steady-state flow conditions in a homogeneous, unconsolidated aquifer. The model considers first-order decay, retardation and three-dimensional dispersion. In the QD model, concentrations are calculated for a single species and reactions between constituents are not considered. The QD model provides a conservative estimate of compound migration based on the assumption that contaminants are continuously introduced into the aquifer at the specified input concentration and over the entire specified time period being modeled.

7.3 Model Input Parameters

Source Concentrations: **Starting Concentrations and Date:**

5 year and 30-Year Prediction

Benzene MW-1: 0.666 mg/l (max. over SC period)

Dispersivity Values: Dispersivity values were calculated following the basic principles below utilizing time intervals specific to the term of the model prediction.

A_x = X/10; where X = groundwater velocity ($V_{seepage}$) * Time
Ay = Ax/10
Az = 0.0001 (QD default value)
$V_{seepage}$ = (hydraulic conductivity * hydraulic gradient) / (effective porosity)

Attenuation Lambda (reference values from 25 PACode §250):

Benzene 0.000958

KOC (reference values from 25 PACode §250):

Benzene 58

Source Width: 30 feet (approximate width of former UST field)

Source Thickness: 3 feet (~smear zone thickness)

Hydraulic Conductivity ($K_{GeoMean}$): 0.39 feet/day (Calculated from pump test by previous consultant, Mulry and Cresswell Environmental, Inc. (2000), **Appendix I**)

Hydraulic Gradient ($\Delta h/lA_{verage}$): 0.0025 feet/feet (April 9, 2025 data)

Effective Porosity (n_e): 0.3 (book value based on rock type)

Soil Bulk Density: 1.8 g/cm^3

Fraction of Organic Carbon: 0.005

Term (predication): 30 year (10,950 days)

7.4 Fate and Transport Model Results

- MW-5 – Benzene 30-year model: 14 feet at a concentration of 0.005 mg/l

A copy of the QD model spreadsheet are provided in **Appendix J** for reference.

8.0 Conclusions

The following is a summary of the conclusions and recommendations for the Site, based upon the information presented in this Site Characterization Report.

- *Soil Investigation*
    - A total of 17 soil samples have been collected from 12 soil boring locations during the August and November 2024 sampling events.
    - Of the 17 soil samples collected, only one contained concentrations of at least one PAUG target parameter in exceedance of its respective NRSHS.
    - Of the 12 soil borings, analytical data indicated one contained concentrations of at least one PAUG target parameter in exceedance of its respective standard.
    - Benzene, toluene, and ethylbenzene have all been detected in exceedance of their respective NRSHS in 24-SB-1.
    - Benzene, toluene, and ethylbenzene were also detected above their respective Soil Vapor Intrusion Screening Values in samples 24-SB-1 and 24-SB-2. The samples were both collected beyond the 30 ft. horizontal proximity distance to the occupied Site structure.
    - The soil sample exceeding NRSHS is located at 17.5-18 ft. bgs., where refusal was encountered during the soil boring investigation. This is well above the water table, which is located between approximately 35 and 38 ft. bgs.
    - Based on a review of the soil data presented within this report, soil impacts have been delineated at the Site.

- *Groundwater Investigation*
    - A total of eight monitoring wells (MW-1 through MW-8) have been installed at the Site.
    - Depth to water levels range from 35 to 39 ft. bgs.
    - Separate phase liquids have not been identified in groundwater at the Site.
    - Groundwater flow direction at the Site is generally to the west-southwest.
    - Hydraulic gradient at the Site is approximately 0.0025 ft/ft (April 9, 2025 data).
    - Benzene has been consistently detected above its respective NRSHS in MW-1 through MW-3.
    - MTBE has been consistently detected above its respective NRSHS in MW-2.
    - There have been singular detections of Toluene in MW-1 and of benzene in MW-4 above their respective NRSHS, which have not been replicated.
    - Fate and transport model results indicate unleaded gasoline compounds are not expected to migrate off-Site under current conditions.

- *Vapor Intrusion* – Based on the reported groundwater and soil data to date, vapor intrusion is not an exposure pathway for Site occupants or adjoining property occupants, but additional evaluation is necessary prior to eliminating all pathways
- Potential preferential pathways along utilities in the area need to be evaluated.
- *Soil and Groundwater Remediation* – Synergy will submit a Remedial Action Plan (RAP) within 45 days which will include additional site characterization work necessary and information on remediation remedies for onsite soils and groundwater.

9.0 Recommendations

9.1 Quarterly Monitoring

Synergy proposes to continue to conduct quarterly groundwater monitoring of the complete monitoring well network to assess the progress of the identified impacts of Site groundwater. Synergy will submit a Remedial Action Progress Report (RAPR) to PADEP after each quarter, assessing the events and results of the previous quarter.

9.2 Remedial Action Plan

Synergy will submit a Remedial Action Plan (RAP) to PADEP within 45 days of submitting this SCR detailing the remedial approach Synergy plans to undertake for soil and groundwater. The RAP will discuss the Site conditions and the methods of approach to attain NRSHS in the impacted media.

APPENDIX A

Notification of Reportable Release

NOTIFICATION OF RELEASE *(Owners and Operators)*

FACILITY I.D. NUMBER 51 - 30277

☒ Initial
☐ Follow-Up

NOTIFICATION OF CONTAMINATION *(Certified Installers and Inspectors)*

INFORMATION FOR OWNERS AND OPERATORS (O/O)

The Storage Tank Program's Corrective Action Process (CAP) regulations establish requirements for owners and operators of storage tank systems and storage tank facilities to report confirmed releases and, in certain cases, suspected releases.

Suspected Release Reporting: Upon the completion of a suspected release investigation from which it could not be determined whether a release has occurred, the owner or operator must, within 15 days of the indication of the suspected release, complete and submit this form to the appropriate regional office of the Department (Subsection 245.304(c)(2)).

Confirmed Release Reporting: The owner or operator must notify the appropriate regional office of the Department by telephone as soon as practicable, but no later than 24 hours, after the confirmation of a release (Subsections 245.305(a) and (b)). Within 15 days of that telephone notification, the owner or operator must complete and submit this form to the appropriate regional office of the Department, to each municipality in which the release occurred, and to each municipality where that release has impacted environmental media or water supplies, buildings, or sewer or other utility lines (Subsections 245.305(c) and (e)). And if new impacts to environmental media or water supplies, buildings, or sewer or other utility lines are discovered after that initial written notification, the owner or operator must, within 15 days of the discovery of the new impact, complete and submit this form to the Department and to each impacted municipality (Subsections 245.305(d) and (e)).

INFORMATION FOR CERTIFIED INSTALLERS AND INSPECTORS (I/I)

In accordance with the Storage Tank Program's certification regulations, certified installers and inspectors must complete and submit this form to the Department within 48 hours of observing any of the following while performing services as a certified installer or inspector: a release of a regulated substance; suspected or confirmed contamination of soil, surface or groundwater from regulated substances; or a regulated substance in a containment structure or facility (Subsections 245.132(a)(4) and 245.132(a)(6)).

INSTRUCTIONS

Record the storage tank facility I.D. number at the top right-hand corner of each page of this form.

Owners and Operators (O/O): Indicate if this is an initial or follow-up notification by marking the appropriate box found in the top right-hand corner of this page.

- To report a Suspected Release, complete all information in Sections I, II, IIIA, IIIC, VI, VIII and IX.
- To report a Confirmed Release, complete all information in Sections I, II, IIIA, IIIB, IIIC, IV, V, VIII and IX.

Certified Installers and Inspectors (I/I): Complete all information in Sections I, II, IIIA, IIIC, VI or VII, VIII, and IX. Attach a copy of the failed, valid tightness test results, if applicable.

PLEASE SEND COMPLETED ORIGINAL FORM TO:

IV. CONFIRMED RELEASE INFORMATION (O/O Only)

Date Release was Confirmed: 01 (m) / 25 (d) / 2024 (y)

Date Owner/Operator Verbally Notified Appropriate Regional Office of Confirmed Release and Office Notified:
Date: 01 (m) / 25 (d) / 2024 (y) Office: SOUTHEAST REGION

Date Owner/Operator Sent Copy of this Written Notification to Local Municipality(ies) and Name of Municipality(ies) Notified:
Date: 01 (m) / 26 (d) / 2024 (y) Municipality: PHILADELPHIA
Date: ___ (m) / ___ (d) / ___ (y) Municipality: _____

Source (Mark All That Apply ☒):

- Tank (DEP Assigned Nos. 003) ☐
- Piping System (Aboveground Regulated) ☐
- Piping System (Underground Regulated) ☐
- Piping System (Non-Regulated) ☐
- Dispenser/Dispensing Equipment ☐
- Spill Prevention Equipment ☐
- Submersible Turbine Pump Head/Fittings ☐
- Containment/Sump Failure ☐
- Other (Specify) CRACK IN FG TANK ☒
- Unknown ☐

Cause (Mark All That Apply ☒):

- Faulty Installation ☐
- Corrosion ☐
- Physical/Mechanical Failure ☒
- Spill During Delivery ☐
- Overfill at Delivery ☐
- Vehicle Gas Tank Overfill ☐
- Product Delivery Hose Rupture ☐
- Accident/Natural Disaster ☐
- Other (Specify) _____ ☐
- Unknown ☐

How Discovered (Mark All That Apply ☒):

- During Closure ☒
- Lining Installation ☐
- Routine Leak Detection ☐
- Third Party Inspection ☐
- Tightness Testing Activities ☐
- Visible Product or Odor Reports ☐
- Water in Tank ☐
- Construction ☐
- Upgrade/Repair ☐
- Supply Well Sample Results ☐
- Monitoring Well Sample Results ☐
- Property Transfer ☐
- Other (Specify) _____ ☐
- Unknown ☐

Environmental Media Affected and Impacts (Mark All That Apply ☒):

- Soil ☒
- Sediment ☐
- Surface Water ☐
- Ground Water ☐
- Bedrock ☐
- Water Supplies ☐
- Vapors/Product in Buildings ☐
- Vapors/Product in Sewer/Utility Lines ☐
- Ecological Receptors ☐

V. INTERIM REMEDIAL ACTIONS (O/O Only)

Indicate the Interim Remedial Actions Planned, Initiated or Completed (Mark All That Apply ☒):

	Planned	Initiated	Completed	Not Applicable
Regulated Substance Removed from Storage Tanks	☐	☐	☒	☐
Fire, Explosion and Safety Hazards Mitigated	☐	☐	☐	☒
Contaminated Soil Excavated	☐	☒	☐	☐
Free Product Recovered	☐	☐	☐	☒
Water Supplies Identified and Sampled	☐	☐	☐	☒
Temporary Water Supplies Provided	☐	☐	☐	☒
Other (Specify) _____	☐	☐	☐	☐

VI. SUSPECTED RELEASE / CONTAMINATION INFORMATION (Both O/O and I/I)

Date the Indication of a Suspected Release / Contamination was Observed: ___ / ___ / _____ (m / d / y)

Indication of Suspected Release / Contamination (Mark All That Apply ☒):

- ☐ Unusual Level of Vapors
- ☐ Erratic Behavior of Product Dispensing Equipment
- ☐ Release Detection Results Indicate a Release
- ☐ Discovery of Holes in the Storage Tank
- ☐ Containment Sump Test Failure
- ☐ Spill Prevention Equipment Test Failure
- ☐ Other (Specify) _____

VII. CONFIRMED CONTAMINATION INFORMATION (I/I Only)

Date the Confirmed Contamination was Observed: 01 / 25 / 2024 (m / d / y)

Extent of Confirmed Contamination (Mark All That Apply ☒):

- ☒ Product Stained or Product Saturated Soil or Backfill
- ☐ Ponded Product
- ☐ Free Product or Sheen on Ponded Water
- ☐ Free Product or Sheen on the Ground Water Surface
- ☐ Free Product or Sheen on Surface Water
- ☐ Other (Specify) CRACK IN TANK

VIII. ADDITIONAL INFORMATION (Both O/O and I/I)

Provide any additional, relevant, available information concerning the release or contamination. If reporting a confirmed release, include specific details about the source and cause of the release, the affected environmental media, and any impacts to water supplies, buildings, or sewer or other utility lines. Owners or Operators reporting a suspected release should describe what procedures were followed to investigate the indication(s) of the suspected release noted in Section VI. Provide both DEP-assigned and owner/operator-assigned tank number(s), where applicable. Use additional 8½" x 11" sheets of paper, if necessary.

DURING THE REMOVAL FOR PERMANENT CLOSURE OF UST 003, A CIRCUMFERENTIAL CRACK WAS IDENTIFIED ALONG THE BOTTOM OF THE NORTH END OF THE SINGLE-WALL FIBERGLASS TANK. OBVIOUS GASOLINE-IMPACTED SOIL WAS ALSO OBSERVED (PID FIELD-SCREENING) BENEATH THE NORTH END OF UST 003. NO IMPACTS TO WATER SUPPLIES, BUILDINGS OR UNDERGROUND UTILITIES WERE IDENTIFIED DURING THE CLOSURE ASSESSMENT.

IX. CERTIFICATION (Both O/O and I/I)

OWNER OR OPERATOR CERTIFICATION

I, JAMES KERRIGAN, hereby certify, under penalty of law as provided in 18 Pa.
(Print Name)

C.S.A. §4904 (relating to unsworn falsification to authorities) that I am the owner or operator of the above referenced storage tank facility and that the information provided by me in this notification is true, accurate and complete to the best of my knowledge and belief.

UNDERGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

Owners who are permanently closing underground storage tank systems may use this form to demonstrate that a storage tank system closure was performed in accordance with technical guidance document 263-4500-601 "Closure Requirements for Underground Storage Tank Systems". PLEASE PRINT OR TYPE. COMPLETE ALL QUESTIONS.

SECTION I. Owner/Facility/Tank/Waste Management and Disposal Information

1. Facility ID Number 51-30277
2. Facility Name GATZ AUTO
3. Facility County PHILADELPHIA
4. Facility Municipality PHILADELPHIA
5. Facility Address 2899 HOLME AVENUE, PHILADELPHIA, PA 19152
6. Facility Contact Person JAMES KERRIGAN
7. Facility Telephone Number (267) 994-4466
8. Owner Name GATZ AUTO, INC.
9. Owner Mailing Address 2899 HOLME AVENUE, PHILADELPHIA, PA 19152
10. Description of Underground Storage Tank Systems (Complete for each tank system closed)

DATE OF TANK SYSTEM CLOSURE (Month/Day/Year)		1 - 26 - 2024	1 - 26 - 2024	1 - 25 - 2024	- -

Describe Closure Activities:

FERGUSON & McCANN, INC. DECOMMISSIONED, CLEANED AND REMOVED UST SYSTEMS 001, 002 AND 003 INCLUDING THE TANKS, PUMPS, PIPING AND APPURTENANT EQUIPMENT. MARSHALL GEOSCIENCE, INC. PERFORMED THE CLOSURE ASSESSMENT DURING THE REMOVAL OF UST SYSTEMS 001, 002 AND 003 FOR PERMANENT CLOSURE.

Yes N/A

11. Briefly describe the storage tank facility and the nature of the operations which were conducted at the facility (both historical and present) **including use of the storage tank systems:**

THE REGULATED GASOLINE UST SYSTEMS WERE FORMERLY USED TO STORE AND DISPENSE FUEL FOR RETAIL SALE BY GATZ AUTO.

☒ ☐ 12. A site location and sampling map of the site, drawn to scale, is attached. ~~See page 11 of 11~~
SEE FIGURES 1 THROUGH 3.

☒ ☐ 13. Original, color photographs of the closure process are attached (i.e., inside of excavation/piping runs, pit water, tanks showing condition).
SEE PHOTOGRAPHS ATTACHMENT.

☒ ☐ 14. An amended "Storage Tanks Registration/Permitting Application" Form was submitted to the DEP, Bureau of Environmental Cleanup and Brownfields, Division of Storage Tanks, P.O. Box 8762, Harrisburg, PA 17105-8762.
Date: 01/ 29 / 2024

☒ ☐ 15. If a release was confirmed, the appropriate regional office of DEP was notified by the owner or operator.
Date: 01 / 25 / 2024 Office: SOUTHEAST REGION

Yes N/A

☒ ☐ 16. If tanks were cleaned on-site:

a. Briefly describe the disposition of usable product: USABLE PRODUCT WAS DISPENSED TO THE MAXIMUM EXTENT POSSIBLE.

b. Briefly describe the disposal of unusable product, sludges, sediments, and wastewater generated during cleaning. Provide the name and permit number of the processing, treatment, storage or disposal facility. (Attach documentation of proper disposal):
WASTEWATER GENERATED DURING TANK CLEANING (750 Gallons) WAS REMOVED, TRANSPORTED AND PROPERLY DISPOSED USING A VACUUM TRUCK BY MILLER ENVIRONMENTAL GROUP (SEE ATTACHMENT 1).

c. If tank contents were determined/deemed to be hazardous waste, provide:

(1) Generator ID Number:

(2) Licensed Hazardous Waste Transporter Name and ID Number:

☐ ☒ 17. If tanks were removed from the site for cleaning:

a. Provide the name and permit number of the processing, treatment, storage or disposal facility performing the tank cleaning:

b. If tank contents were determined/deemed to be hazardous waste, provide:

(1) Generator ID Number:

(2) Licensed Hazardous Waste Transporter Name and ID Number:

18. Briefly describe the disposition of tanks/piping (Attach documentation of proper disposal):
THE UST SYSTEM TANKS, PIPING AND APPURTENANT EQUIPMENT WERE PROPERLY DISPOSED AT DELAWARE COUNTY SOLID WASTE AUTHORITY (SEE ATTACHMENT 2).

☒ ☐ 19. If contaminated soil is excavated:

a. Briefly describe the disposition and amount 57.19 (tons) of contaminated soil. Provide the name and permit number of the processing, treatment, storage or disposal facility. (Attach documentation of proper disposal):
A TOTAL OF 57.19 TONS OF GASOLINE-IMPACTED SOILS WAS PROPERLY TRANSPORTED AND RECYCLED AT SOIL SAFE, INC.'S LOGAN, NEW JERSEY FACILITY (SEE ATTACHMENT 3).

b. If contaminated soil is determined/deemed to be hazardous waste, provide:

(1) Generator ID Number:

(2) Licensed Hazardous Waste Transporter Name and ID Number:

Yes	N/A		
☒	☐	20.	Briefly describe the disposition of and amount ~480 (tons) of uncontaminated soil and debris (attach analyses): CONCRETE WAS MANAGED OFFSITE BY BLUE MOUNTAIN MULCH (6 LOADS) AND GILL QUARRIES (1 LOAD) (SEE ATTACHMENT 4). NO EVIDENCE OF CONTAMINATION WAS OBSERVED IN THE EXCAVATED MATERIALS BASED ON PHYSICAL OBSERVATIONS, PID FIELD-SCREENING AND LABORATORY ANALYSES (SEE BF-1 IN TABLE 1 AND ATTACHMENT 5).
☐	☒	21.	If the tanks were "Closed-in-Place" provide information below.

a. Briefly describe the tank cleaning process. _____

b. Describe the inert, non-shrinking material placed into the tanks: _____

I, JAMES KERRIGAN (Print Name), hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn falsification to authorities) that I am the owner of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section I) is true, accurate and complete to the best of my knowledge and belief.

UNDERGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION II. Tank Handling Information

Facility ID Number 51 - 30277
DEP Tank ID Number(s) 001, 002 and 003

Yes N/A

1. Briefly describe the excavation and initial on-site staging of uncontaminated/contaminated soil and debris:

   UNCONTAMINATED SOIL WAS STAGED ON-SITE PRIOR TO REUSE TO PARTIALLY BACKFILL THE TANK EXCAVATION. CONTAMINATED SOIL WAS ENVELOPED WITH PLASTIC SHHETING AND STAGE ON THE STATION'S PAVED LOT PRIOR TO MANAGEMENT OFFSITE.

2. Briefly describe the method of piping system closure and the closure of the piping systems, including the quantity and condition of the piping:

   ALL PIPING WAS IN GOOD CONDITION AND REMOVED FOR PERMANENT CLOSURE.

3. Briefly describe the condition of the tanks and any problems encountered during tank handling or tank removal activities:

   UST 001: GOOD CONDITION. UST 002: CIRCUMFERENTIAL CRACK AT NORTH END OF TANK, BUT NO EVIDENCE OF A RELEASE. UST 003: CIRCUMFERENTIAL CRACK AT NORTH END OF TANK WITH EVIDENCE OF RELEASE (PADEP NOTIFIED).

4. Briefly describe the method used to purge the tanks of and monitor for hazardous or explosive vapors:

   PURGED TANKS WITH AIR EXCHANGER AND CHECKED TANK ATMOSHERE WITH LEL METER.

☒ ☐ 5. If tanks were cleaned on-site:

   a. Briefly describe the tank cleaning process:
   TANKS WERE TRIPLE-RINSED WITH CLEAN WATER. WASTEWATER WAS REMOVED AND PROPERLY DISPOSED USING A VACUUM TRUCK.

   b. If subcontracted, name and address of company that performed the tank cleaning:

☐ ☒ 6. If tanks were “Closed-in-Place”, briefly describe the tank fill material:

☒ ☐ 7. If contamination was suspected or observed, the “Notification of Contamination” form was submitted.

I, TIMOTHY FISCHER, hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn falsification to authorities) that I am the certified remover who performed the tank handling activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section I) is true, accurate and complete to the best of my knowledge and belief.

UNDERGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 001 (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 30277

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water N/A feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1.) Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO - - - - - → Conduct confirmatory sampling - - - - - → See end of this section for options on submission and maintenance of closure records - - - - - → Do not complete item C.2. below.

☐ YES - - - - - → Report release to DEP within 24 hours - - - - → Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills): _____

_____

_____

_____

_____ - - - - → Complete item C.2. below.

2.) Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES - - - - → Remove or remediate contaminated soil - - - - → Conduct confirmatory sampling - - - - → See end of this section for options on submission and maintenance of closure records - - - - → Call Indemnification Fund (717-787-0763).

☐ NO - - - - → Continue Interim Remedial Actions - - - - → See end of this section for options on submission and maintenance of closure records - - - - → Call Indemnification Fund (717-787-0763).

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO - - - - → Conduct confirmatory sampling - - - - → See end of this section for options on submission and maintenance of closure records.

☐ YES - - - - → Report release to DEP within 24 hours - - - - → Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills): _____

_____

_____

_____

Continue with corrective action - - - - → See end of this section for options on submission and maintenance of closure records - - - - → Call Indemnification Fund (717-787-0763).

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, GILBERT J. MARSHALL (Print Name), hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

UNDERGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 003 (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 30277

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water N/A feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1.) Was obvious contamination observed while excavating, sampling or removing the tank system?

☐ NO ------→ Conduct confirmatory sampling ------→ See end of this section for options on submission and maintenance of closure records ------→ Do not complete item C.2. below.

☒ YES ------→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills): _____

_____

_____

_____

_____ ----→ Complete item C.2. below.

2.) Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Call Indemnification Fund (717-787-0763).

☒ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records ----→ Call Indemnification Fund (717-787-0763).

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills): _____

_____

_____

_____

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records ----→ Call Indemnification Fund (717-787-0763).

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, GILBERT J. MARSHALL (Print Name), hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.
N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

Definitions/Glossary

Client: Marshall Geoscience
Project/Site: 019333

Job ID: 460-296847-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
460-296847-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 1/23/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.1°C

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Method 8260D - Volatile Organic Compounds by GC/MS
Samples GD-1 (296847-1), GD-2 (296847-2), GD-3 (296847-3) and GP-1 (296847-4) were analyzed for Volatile Organic Compounds by GC/MS. The samples were prepared on 1/25/2024 and analyzed on 1/26/2024 and 1/27/2024.

Method Moisture - Percent Moisture
Samples GD-1 (296847-1), GD-2 (296847-2), GD-3 (296847-3) and GP-1 (296847-4) were analyzed for Percent Moisture. The samples were analyzed on 1/24/2024.

Accreditation/Certification Summary

Client: Marshall Geoscience
Project/Site: 019333

Job ID: 460-296847-1

Laboratory: Eurofins Edison

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	68-00522	02-29-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

TALS Sample Number	Ammonia (pH<2)	COD (pH<2)	Nitrate Nitrite (pH<2)	Metals* (pH<2)	Hardness (pH<2)	Pest (pH 5-9)	EPH or QAM (pH<2)	Phenols (pH<2)	Sulfide (pH>9)	TKN (pH<2)	TOC (pH<2)	Total Cyanide (pH>12)	Total Phos (pH<2)	Other	Other

If pH adjustments are required record the information below:

Sample No(s). adjusted _____

Preservative Name/Conc. _____ Volume of Preservative used (ml) _____

Lot # of Preservative(s). _____ Expiration Date. _____

The appropriate Project Manager and Department Manager should be notified about the samples which were pH adjusted.

** Samples for Metal analysis which are out of compliance must be acidified at least 24 hours prior to analysis.*

Initials HS Date 1/23/24

Creator: Lysy, Susan

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Table of Contents

Definitions/Glossary

Client: Marshall Geoscience
Project/Site: 019333

Job ID: 460-297275-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
460-297275-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 1/30/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.1°C

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Receipt Exceptions
Containers were received for the following sample, but it was not listed on the COC. BF-1 (460-297275-10). Client sent permission to analyze.

Method 8260D - Volatile Organic Compounds by GC/MS
Samples 001-1 (297275-1), 001-2 (297275-2), 001-3 (297275-3), 002-1 (297275-4), 002-2 (297275-5), 002-3 (297275-6), 003-1 (297275-7), 003-2 (297275-8), 003-3 (297275-9) and BF-1 (297275-10) were analyzed for Volatile Organic Compounds by GC/MS. The samples were prepared on 2/1/2024 and analyzed on 2/2/2024, 2/3/2024 and 2/5/2024.

Sample 003-3 (297275-9)[2500x] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The laboratory control sample duplicate (LCSD) for analytical batch 460-957750 recovered outside control limits for the following analyte: Toluene. This analyte was biased low in the LCSD and within control limits in LCS, the data have been flagged and reported.

The following sample was diluted to bring the concentration of target analytes within the calibration range: 003-3 (460-297275-9). Elevated reporting limits (RLs) are provided.

The following sample required a dilution due to the nature of the sample matrix: 003-3 (460-297275-9). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method Moisture - Percent Moisture
Samples 001-1 (297275-1), 001-2 (297275-2), 001-3 (297275-3), 002-1 (297275-4), 002-2 (297275-5), 002-3 (297275-6), 003-1 (297275-7), 003-2 (297275-8), 003-3 (297275-9) and BF-1 (297275-10) were analyzed for Percent Moisture. The samples were analyzed on 2/1/2024.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Certificate of Analysis

Enclosed are the analytical results for samples received by the laboratory on Aug 16, 2024.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Jessica Smith (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

Reference

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- Except as qualified, Clean Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 136, including but not limited to the following EPA Method reference revisions:
  EPA 300.1 Rev. 1.0-1997
  EPA 300.0 Rev. 2.1-1993
  EPA 353.2 Rev. 2.0-1993
  EPA 410.4 Rev. 1.0-1993
  EPA 420.4 Rev. 1.0-1993
  EPA 365.1 Rev. 2.0-1993
  EPA 200.7 Rev. 4.4-1994
  EPA 200.8 Rev. 5.4-1994
  EPA 245.1 Rev. 3.0-1994
- Except as qualified, Safe Drinking Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 141.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND) above the MDL
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Practical Quantitation Limit for this Project
ND	Not Detected - indicates that the analyte was Not Detected
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits
#	Please reference the result in the Results Section for analyte-level flags.

Certificate of Analysis

Enclosed are the analytical results for samples received by the laboratory on Nov 05, 2024.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Jessica Smith (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

ALS Middletown: 301 Fulling Mill Road, Middletown, PA 17057 : 717-944-5541.

Reference

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- Except as qualified, Clean Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 136, including but not limited to the following EPA Method reference revisions:
  EPA 300.1 Rev. 1.0-1997
  EPA 300.0 Rev. 2.1-1993
  EPA 353.2 Rev. 2.0-1993
  EPA 410.4 Rev. 1.0-1993
  EPA 420.4 Rev. 1.0-1993
  EPA 365.1 Rev. 2.0-1993
  EPA 200.7 Rev. 4.4-1994
  EPA 200.8 Rev. 5.4-1994
  EPA 245.1 Rev. 3.0-1994
- Except as qualified, Safe Drinking Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 141.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND) above the MDL
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Practical Quantitation Limit for this Project
ND	Not Detected - indicates that the analyte was Not Detected
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits
#	Please reference the result in the Results Section for analyte-level flags.

Project Notations

Sample Notations

Lab ID	Sample ID

Result Notations

Notation Ref.	
1	The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte Ethylbenzene. The % Recovery was reported as 137 and the control limits were 76 to 136.
2	The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Isopropylbenzene. The % Recovery was reported as 148 and the control limits were 72 to 137.
3	The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte Isopropylbenzene. The % Recovery was reported as 154 and the control limits were 72 to 137.
4	The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Naphthalene. The % Recovery was reported as -55.9 and the control limits were 46 to 142.
5	The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte Total Xylenes. The % Recovery was reported as 145 and the control limits were 75 to 136.
6	The QC sample type MS for method SW846 8260B was outside the control limits for the analyte 1,3,5-Trimethylbenzene. The % Recovery was reported as 142 and the control limits were 74 to 137.
7	The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte 1,3,5-Trimethylbenzene. The % Recovery was reported as 169 and the control limits were 74 to 137.

Analytical Results Report For

Synergy Environmental, Inc.

Project Gatz Auto 24-01483
Workorder 3405452
Report ID 399310 on 3/24/2025 (Revised report. See Project Notations Section.)

Certificate of Analysis

Enclosed are the analytical results for samples received by the laboratory on Mar 13, 2025.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Jessica Smith (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

Reference

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- Except as qualified, Clean Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 136, including but not limited to the following EPA Method reference revisions:
  EPA 300.1 Rev. 1.0-1997
  EPA 300.0 Rev. 2.1-1993
  EPA 353.2 Rev. 2.0-1993
  EPA 410.4 Rev. 1.0-1993
  EPA 420.4 Rev. 1.0-1993
  EPA 365.1 Rev. 2.0-1993
  EPA 200.7 Rev. 4.4-1994
  EPA 200.8 Rev. 5.4-1994
  EPA 245.1 Rev. 3.0-1994
- Except as qualified, Safe Drinking Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 141.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND) above the MDL
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Practical Quantitation Limit for this Project
ND	Not Detected - indicates that the analyte was Not Detected
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits
#	Please reference the result in the Results Section for analyte-level flags.

Analytical Results Report For **Synergy Environmental, Inc.**

Project Gatz Auto 24-01483
Workorder 3409907
Report ID 411616 on 4/28/2025

Certificate of Analysis

Enclosed are the analytical results for samples received by the laboratory on Apr 09, 2025.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Jessica Smith (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

ALS Middletown: 301 Fulling Mill Road, Middletown, PA 17057 : 717-944-5541.

Recipient(s):
Synergy Environmental, Inc. - Synergy Environmental, Inc.

Reference

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- Except as qualified, Clean Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 136, including but not limited to the following EPA Method reference revisions:
  EPA 300.1 Rev. 1.0-1997
  EPA 300.0 Rev. 2.1-1993
  EPA 353.2 Rev. 2.0-1993
  EPA 410.4 Rev. 1.0-1993
  EPA 420.4 Rev. 1.0-1993
  EPA 365.1 Rev. 2.0-1993
  EPA 200.7 Rev. 4.4-1994
  EPA 200.8 Rev. 5.4-1994
  EPA 245.1 Rev. 3.0-1994
- Except as qualified, Safe Drinking Water Act sample analyses are consistent with methodology requirements in 40 CFR Part 141.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix “S” followed by a method number (such as S2310B-97) refer to methods from “Standard Methods for the Examination of Water and Wastewater”.
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND) above the MDL
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Practical Quantitation Limit for this Project
ND	Not Detected - indicates that the analyte was Not Detected
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits
#	Please reference the result in the Results Section for analyte-level flags.

Project Notations

Sample Notations

Lab ID	Sample ID		
3409907001	MW-1	S1	The 8260B analysis of this sample was initially run within holding time. Re-analysis at a dilution from a previously analyzed vial with headspace was conducted past the fourteen day sample holding time.

APPENDIX H

Pennsylvania Natural Diversity Inventory Sheet

1. PROJECT INFORMATION

Project Name: **Gatz Auto**
Date of Review: **5/27/2025 03:08:34 PM**
Project Category: **Hazardous Waste Clean-up, Site Remediation, and Reclamation, Voluntary cleanup (Act 2 and Chapter 250)**
Project Area: **0.36 acres**
County(s): **Philadelphia**
Township/Municipality(s): **Philadelphia City**
ZIP Code:
Quadrangle Name(s): **FRANKFORD**
Watersheds HUC 8: **Lower Delaware**
Watersheds HUC 12: **Lower Pennypack Creek**
Decimal Degrees: **40.056811, -75.029087**
Degrees Minutes Seconds: **40° 3' 24.5185" N, 75° 1' 44.7148" W**

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	No Known Impact	No Further Review Required
PA Fish and Boat Commission	**Potential Impact**	**FURTHER REVIEW IS REQUIRED, See Agency Response**
U.S. Fish and Wildlife Service	No Known Impact	No Further Review Required

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate there may be potential impacts to threatened and endangered and/or special concern species and resources within the project area. If the response above indicates "No Further Review Required" no additional communication with the respective agency is required. If the response is "Further Review Required" or "See Agency Response," refer to the appropriate agency comments below. Please see the DEP Information Section of this receipt if a PA Department of Environmental Protection Permit is required.

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jursidictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission

RESPONSE:

No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources

RESPONSE:

No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Fish and Boat Commission

RESPONSE:

Further review of this project is necessary to resolve the potential impact(s). Please send project information to this agency for review (see WHAT TO SEND).

PFBC Species: (Note: The Pennsylvania Conservation Explorer tool is a primary screening tool, and a desktop review may reveal more or fewer species than what is listed below.)

Scientific Name	Common Name	Current Status
Sensitive Species**		Threatened

U.S. Fish and Wildlife Service

RESPONSE:

No impacts to **federally** listed or proposed species are anticipated. Therefore, no further consultation/coordination under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq. is required. Because no take of federally listed species is anticipated, none is authorized. This response does not reflect potential Fish and Wildlife Service concerns under the Fish and Wildlife Coordination Act or other authorities.

* Special Concern Species or Resource - Plant or animal species classified as rare, tentatively undetermined or candidate as well as other taxa of conservation concern, significant natural communities, special concern populations (plants or animals) and unique geologic features.
** Sensitive Species - Species identified by the jurisdictional agency as collectible, having economic value, or being susceptible to decline as a result of visitation.

WHAT TO SEND TO JURISDICTIONAL AGENCIES

If project information was requested by one or more of the agencies above, upload* or email the following information to the agency(s) (see AGENCY CONTACT INFORMATION). Instructions for uploading project materials can be found here. This option provides the applicant with the convenience of sending project materials to a single location accessible to all three state agencies (but not USFWS).
*If information was requested by USFWS, applicants must email, or mail, project information to IR1_ESPenn@fws.gov to initiate a review. USFWS will not accept uploaded project materials.

Check-list of Minimum Materials to be submitted:
____Project narrative with a description of the overall project, the work to be performed, current physical characteristics of the site and acreage to be impacted.
____A map with the project boundary and/or a basic site plan(particularly showing the relationship of the project to the physical features such as wetlands, streams, ponds, rock outcrops, etc.)
In addition to the materials listed above, USFWS REQUIRES the following
____**SIGNED** copy of a Final Project Environmental Review Receipt

The inclusion of the following information may expedite the review process.
____Color photos keyed to the basic site plan (i.e. showing on the site plan where and in what direction each photo was taken and the date of the photos)
____Information about the presence and location of wetlands in the project area, and how this was determined (e.g., by a qualified wetlands biologist), if wetlands are present in the project area, provide project plans showing the location of all project features, as well as wetlands and streams.

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. Two review options are available to permit applicants for handling PNDI coordination in conjunction with DEP's permit review process involving either T&E Species or species of special concern. Under sequential review, the permit applicant performs a PNDI screening and completes all coordination with the appropriate jurisdictional agencies prior to submitting the permit application. The applicant will include with its application, both a PNDI receipt and/or a clearance letter from the jurisdictional agency if the PNDI Receipt shows a Potential Impact to a species or the applicant chooses to obtain letters directly from the jurisdictional agencies. Under concurrent review, DEP, where feasible, will allow technical review of the permit to occur concurrently with the T&E species consultation with the jurisdictional agency. The applicant must still supply a copy of the PNDI Receipt with its permit application. The PNDI Receipt should also be submitted to the appropriate agency according to directions on the PNDI Receipt. The applicant and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at https://conservationexplorer.dcnr.pa.gov/content/resources.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a preliminary screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

Duns No. 0005-1078
Fac. ID No. 51-30277

Dear Mr. McClain,

At the request of Mr. Bradford L. Fish of Sunoco Inc. (R & M) (SUN), enclosed please find one copy of the Remedial Feasibility Study generated for the above referenced facility. The report contains a narrative of the methodology and results of a groundwater pumping test and soil vapor extraction test performed on 16 May 2000. Based on the results of these tests and recent groundwater quality data, Mulry and Cresswell Environmental Inc. (MCE), on behalf of SUN will prepare a Remedial Action Plan (RAP) in August 2000.

Please do not hesitate to call me if you have any questions or comments pertaining to the report.

Best regards,

John M. Zatyczyc, P.G.
Geologist

APPENDICES

I INTRODUCTION:

At the request of Mr. Bradford L. Fish, of Sunoco, Inc. (R & M), (SUN), Mulry and Cresswell Environmental, Inc. (MCE) conducted a groundwater pumping and soil vapor extraction test at the Sunoco Service Station located at 2899 Holme Avenue Street, City of Philadelphia, Pennsylvania on 16 May 2000. This testing was performed to obtain hydrogeologic data and to determine the feasibility of groundwater pumping and soil vapor extraction as potential remedial techniques.

As depicted in Figures I and II, Site Location and Surrounding Properties, the site is located at the northwestern corner of Holme Circle between Holme Avenue and Welsh Road in the City of Philadelphia, Pennsylvania, in a mixed residential and commercial area. The subject location is a dealer owned Sunoco service station which performs automobile repairs. According to information obtained by SUN, three 8,000 gallon single walled fiberglass underground storage tanks (USTs), installed in 1982, are currently in use at this site.

On 16 May 2000, the groundwater pumping and soil vapor extraction tests were performed on OW 1, located on the western portion of the facility property. OW 1 has historically contained elevated concentrations of dissolved phase hydrocarbons. Methodology and results of the groundwater pumping and soil vapor extraction tests are discussed in Section III of this report.

A summary and discussion of the results and implications of the above cited tests is presented in Section IV of this report, presenting an evaluation of the feasibility of remedial options at this location.

II HISTORY:

At the request of Mr. Bradford L. Fish of SUN, Groundwater and Environmental Services, Inc. (GES) conducted an Environmental Assessment at the subject location during the month of May 1997 for divestment purposes.

The Environmental Assessment consisted of installing four groundwater observation wells (OWs 1 – 4), sampling and analyzing soil and groundwater from these wells, gauging liquid levels and calculating relative groundwater elevations in the wells. A PADEP well records search was conducted to identify the location of any existing well within 2,500 feet around the site. In addition, a regulatory agency file review and Vista multidatabase search were conducted. Four RCRA sites were identified within 1/8 miles radius of the site, the closest being Lee's Cleaners, located approximately 200 feet west of the site at 2855 Holme Avenue. In addition to the subject facility, one UST site was identified within ¼ mile radius, the Holme Circle Texaco, located approximately 200 feet east of the Sunoco station at 2901 Holme Avenue.

Soil samples were collected from the drill cuttings of all four observation wells on 12 May 1997 and analyzed for BTEX and MTBE (EPA method 8020) and semi-volatiles (EPA method 8270). None of the analytes was reported above method detection/quantification limit for the samples retrieved from 28 – 30 feet below grade surface (bgs) from OW 1, from 28 – 30 feet bgs from OW 3 and from 28 – 30 feet bgs from OW 4. For the sample retrieved from 18 – 20 feet bgs from OW 2, none of the analytes was reported above method detection/quantification limit, with the exception of MTBE, reported at 160 µg/kg. This value is below the PADEP Statewide health standard for soil.

In addition to the analytes described above, groundwater samples were analyzed for semi volatiles by method SW 846 8270C and for total dissolved solids (TDS) by method 160.1 during the initial sampling event on 13 May 1997. None of the semi volatiles was reported above method detection/quantification limit for any of the four wells, with the exception of phenanthrene, reported at 12 µg/l for the groundwater sample from OW 2. The reported TDS concentrations were: 414 mg/l for OW 1; 309 mg/l for OW 2; 216 mg/l for OW 3; and 450 mg/l for OW 4.

At the request of Mr. Fish of SUN, GES initiated a quarterly groundwater monitoring program in October 1997. Mulry and Cresswell Environmental Inc., (MCE) assumed site responsibilities and continued the quarterly groundwater monitoring program at this location in February 2000.

III GROUNDWATER PUMPING AND SOIL VAPOR EXTRACTION TEST – 16 MAY 2000:

A. METHODOLOGY

On 16 May 2000, a groundwater pumping test and soil vapor extraction test was conducted on OW 1. Subsequent to measuring static water table elevations (Table IA) in all observation wells, a submersible pump was deployed into OW 1. The depth to liquid water was measured from the top of the casing, adjacent to a notch in the north side of the casing in each well using an ART model IS-100-E electronic interface sensing probe. The interface sensing probe can distinguish hydrocarbon from water, is calibrated in 0.01' increments, and is intrinsically safe. Prior to measuring depth to liquid and in between measurements in different wells, the sensor probe and several feet of the measuring tape were washed in a solution of tap water and detergent and rinsed with tap water.

It should be noted that the static depth to water in OW 1 prior to the deployment of the pump was approximately 36.86 feet below top of casing (BTOC). With the pump deployed and the vent extension pipe attached to the well head, static depth to water was measured at approximately 38.42 feet from a fixed point on the vent pipe extension. Depth to water and drawdown data have been

corrected in the tables following in this report to compensate for the addition of the vent extension pipe.

The pumping rate was set to allow for sufficient drawdown in the pumping well without drawing the water level below the level of the top of the pump which was set at approximately 42.00 feet BTOC and to increase the de-watered screened interval to maximize the effect of the soil vapor extraction. The total depth of OW 1 was gauged at 43.7 feet BTOC. The pump was set at approximately one foot above the bottom of the well and a pumping rate of approximately 0.33 to 0.43 gallons per minute (gpm) was established to create a maximum drawdown of approximately 2.21 feet below that of the static liquid level in the pumping well (Table IIA).

Initially, for the first 30 minutes of the test, the pumping rate was set at approximately 0.42 to 0.43 gpm. At 35 minutes, the flow rate was decreased to approximately 0.33 gpm. For the duration of the test, the flowrate remained relatively stable ranging between 0.33 to 0.39 gpm.

Liquid level gauging during the pump test indicated that at a flowrate of between 0.42 and 0.43 gpm during the first 30 minutes of the test, the depth to water in the pumping well decreased to approximately 38.64 feet BTOC, approximately 1.78 feet below static conditions. Due to the rapid decrease in the watertable elevation (approximately 0.05 per minute) and the limited water column (approximately 6.84 feet), after approximately 30 minutes of pumping, the flowrate was decreased to approximately 0.33 gpm. At this flowrate, which remained relatively stable for the remainder of the test, the liquid level in OW 1 decreased by approximately between 0.03 to 0.05 feet through 180 minutes of pumping.

At 210 minutes of pumping, with liquid level measurements taken at 30 minute intervals, the water level increased by approximately 0.36 feet from the previous reading at 180 minutes with the flowrate remaining stable. Subsequent readings again showed a decrease of approximately 0.24 feet between the 240 and 270 minute readings. After 300 minutes, (5 hours) of pumping, the liquid level decreased an additional 0.05 feet. This is approximately 2.17 feet below static conditions. At approximately 300 minutes, soil vapor extraction was activated on OW 1. Presumably due to the applied vacuum of approximately 39 inches of water gauge ("H_2O), the liquid level measured at 360 minutes (6 hours) had increased by approximately 0.14 feet from the previous reading. Subsequent readings at 420 minutes (7 hours), 450 minutes (7.5 hours) and 480 minutes (8 hours) showed a slightly decreasing water level in OW 1, ranging between 0.05 and 0.07 feet between each reading. The total pumping time accumulated to approximately 480 minutes (8 hours) with OW 1 under simultaneous soil vapor extraction and groundwater pumping conditions for approximately 120 minutes (2 hours). With no observed response to vacuum in OWs 2 and 3, located

approximately 110 feet from OW 1, and only limited vacuum response of between 0.04" and 0.06 " H_2O measured on OW 4, the vapor extraction test was terminated. A detailed description of the vapor extraction testing results is presented in Section E of this report.

Recovered groundwater was treated with two 55 gallon, 200 lb. liquid phase granular activated carbon (GAC) units prior to discharge to a sanitary sewer system via a cleanout, located along Holme Avenue approximately 60 feet from the pumping well OW 1, under temporary approval from the City of Philadelphia, Water Department. A copy of the approval letter is attached as Appendix A.

Liquid level gauging (Table II B) was conducted on the remaining on-site wells OWs 2, 3 and 4 during the pumping test and simultaneous soil vapor extraction and groundwater pumping test.

B. HYDROGEOLOGY

Static depth to water was measured in all wells (OWs 1, 2, 3 and 4) prior to initiating the pumping test on OW 1. As presented in Table IA, Water Table Elevations, on 16 May 2000 depth to water ranged from a maximum of 37.20 feet below the top of the well casing (BTOC) in OW 4 to a minimum of 35.50 feet BTOC in OW 3.

As depicted on the attached Figure IIIA, Water Table Elevation (WTE Static Conditions) for 16 May 2000, under static conditions, the general direction of groundwater flow was to the southwest at the eastern half of the site under a gradient of approximately 2 feet per 30 feet (0.067 or 6.7%); and to the northwest at the western half of the site under a gradient of approximately 1 foot per 35 feet (0.029 or 2.9%).

As illustrated in Figure IIIB, Water Table Elevation (WTE Pumping Conditions) for 16 May 2000, after approximately eight hours of pumping from OW 1 a cone of depression was created around OW 1, while the magnitude and direction of the groundwater gradient between OWs 2, 3 and 4 did not change from static conditions.

During the 8 hours of pumping, no measurable drawdown was recorded in the surrounding observation wells (OWs 2, 3 and 4). Rather, watertable elevation increased during the course of the day by maximums of 0.02 and 0.04 feet in OWs 2 and 3, respectively and by only 0.01 feet in OW 4 presumably representing natural fluctuation in water table elevations. The data selected to construct Figure IIIB were taken after 8 hours of pumping with a measured drawdown in the pumping well of approximately 2.21 feet BTOC.

C. PUMPING TEST

As presented on Table IIA, the pumping test on OW 1 was conducted for a total approximately 480 minutes (8 hours). During the 8 hours of the pumping test, water table elevations (WTE) in the pumping well OW 1 decreased to a maximum drawdown of approximately 2.21 feet after 480 minutes of pumping. This is illustrated by the drawdown (s) versus time (t) plot attached for OW 1 as Figure IV. Approximately 173 gallons of groundwater were removed during the test, at an average flow rate of approximately 0.36 gpm.

As presented in Table IIB, during the 480 minutes (8 hour) duration of the pump test, no drawdown was measured in the observation wells OWs 2, 3 and 4. OWs 2 and 3 are located approximately 110 feet from OW 1 and OW 4, is located approximately 65 feet from OW 1. Liquid level gauging of these wells commenced at approximately 20 minutes into the pump test. At 20 minutes elapsed time, an increase of 0.01 feet above the static level was measured in OWs 2 and 3 during the first 80 minutes of pumping with no change in WTE in OW 4.

Between 100 minutes and 480 minutes of pumping, the WTE increased to a maximum of 0.02 feet in OW 2, measured after 140 minutes of pumping and a maximum of 0.04 feet in OW 3, which was measured during the seventh hour (420 minutes) and eighth hour (480 minutes) of the test. With respect to OW 4, between the 100 and 480 minute time intervals, a increase of 0.01 feet above the static level was measured in OW 4. These small increases presumably represent background water table changes. The increase in WTE for these wells are denoted as positive values on Table IIB.

During the pump test an influent sample of the groundwater was collected and analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX), methyl tert-butyl ether (MTBE), Naphthalene, and Isopropylbenzene (Cumene) by method 8260A. As presented in Table III, the influent stream sample was reported as containing 6,706 µg/l BTEX, 100 µg/l MTBE, 140 µg/l Naphthalene, and 19 µg/l Cumene.

As required by the Philadelphia Water Department (PWD), an effluent stream sample was collected and analyzed for BTEX by EPA method 8021B and for oil and grease (O & G) by EPA method 1664. Both BTEX and O & G concentrations were reported at non-detectable (ND). Results of the influent and effluent sampling are presented in Table III. Laboratory analytical reports for the influent and effluent groundwater sampling are attached as Appendix B. The results of the effluent stream sample were reported to PWD on 8 June 2000.

D. AQUIFER PARAMETERS

The pump test data from the pumping well (OW 1) was evaluated using the Cooper & Jacob time-drawdown Method, Neuman's Method and the Theis Method corrected for an unconfined aquifer. The calculations for Transmissivity (T), and hydraulic conductivity (K) were calculated for OW 1, the pumping well based on time-drawdown and discharge-time data. The data and associated graphs are depicted in the attached Appendix C. Data from OWs 2, 3 and 4 were not evaluated as no drawdown was measured in these wells during the 480 minutes (8 hours) of pumping. Without drawdown data from those wells, a capture zone was not calculated.

The calculated transmissivity (T) and conductivity (Ks), for each method were:

Method	T (ft^2/min)	Ks (ft/min)
Cooper & Jacob (OW 1) (time-drawdown)	0.0145	0.000291
Neuman's method (OW 1)	0.0137	0.000274
Theis (OW 1), variable discharge rate	0.0153	0.000307
Theis & Jacob (OW 1) Recovery method	0.0104	0.000209
Average:	**0.0135**	**0.000270**

(aquifer thickness "b" assumed to be = 50 feet, where required)

In general, the T and Ks values were in relatively close agreement for the pumping well for all evaluation all methods employed. The average values for the aquifer parameters were calculated as:

Transmissivity T = 0.0135 ft^2/min;
Hydraulic Conductivity Ks = 0.000270 ft/min (0.39 ft/day)

Based upon the average "K" value of 0.000270 ft/min, average gradient "i" of 0.067 ft/ft and approximated porosity "n" of 40 % for clay, the flow velocity can be calculated as:

$V = Ki / n$

V = 0.0000452 ft/min, or approximately 24 feet per year.

E. GROUNDWATER PUMPING AND SOIL VAPOR EXTRACTION TEST

After approximately 300 minutes (5 hours) of pumping, the soil vapor extraction (SVE) line was connected to OW 1 and sealed with the submersible pump still deployed and pumping at a flow rate of between approximately 0.34 and 0.39 gallons per minute in OW 1. The regenerative blower, Rotron model DR 454, was started for the vacuum extraction. Extracted soil gas was treated via two (2) 55 gallon, 200 lb. vapor phase granular activated carbon (GAC) drums

prior to atmospheric discharge. Approval to conduct the SVE test was granted by the City of Philadelphia, Department of Health on 2 May 2000. A copy of the approval letter is attached as Appendix A. Soil gas influent concentrations were measured via a pet cock opening in the vapor line influent to the GAC units using a Gastechtor Portable Gas Alarm, Model No. 1314 SMPN photoionization detector (PID Gastech). A Tedlar™ air sampling bag was also filled via the sampling port with influent soil gas and submitted to the laboratory for analyses for C_2-C_{10} hydrocarbons as propane, BTEX and MTBE concentrations by method EPA 18 and 25 modified (laboratory analysis reports are attached as Appendix D). The filled tedlar bag was immediately placed on ice in a cooler and subsequently transported to MCE's office and transferred to a refrigerator, stored at 4^0 C, prior to submittal via lab courier under chain of custody to Lancaster Laboratories, Inc. for analysis.

At the start of the vapor extraction test, the main flow control valve was fully open. After approximately 5 minutes, with the valve approximately ¾ shut, a vacuum reading was obtained on the influent line with a Dwyer® Magnahelic vacuum (0" to 100" H_2O) gauge to determine vacuum in and flow rate from the SVE well OW 1, as well as for the calculation of hydrocarbon removal rates. Initially, the vacuum was recorded as 39" H_2O. After 15 minutes, vacuum was recorded again at 39" H_2O. Subsequent readings were taken at 30, 45, 60, 90 and 120 minutes. During each of the vacuum measurements, corresponding influent and effluent PID readings were measured with a Gastechtor Portable Gas Alarm, Model No. 1314 SMPN photoionization detector (PID Gastech) in order to determine the optimal vacuum extraction which would produce the maximum influent soil vapor extraction concentrations. With the initial vacuum set at 39" H_2O, the influent concentration was recorded at 160 ppm. During the 30 minute readings, the vacuum control valve was closed slightly in order to determine if an increase in vacuum would result in an increase in the soil vapor gas concentration. With a slight increase in vacuum to 43" H_2O, the influent soil gas concentration was reduced to 130 ppm. Subsequently, the vacuum was adjusted back to 39" H_2O and the influent soil gas concentration increased back to 160 ppm. For the remainder of the vacuum extraction, the vacuum remained stable at 39" H_2O and influent concentrations ranged between 150 and 160 ppm.

Effluent PID readings were also measured at regular time intervals. The effluent concentrations were initially measured at 0.0 ppm after 5 minutes. After 15 minutes, the effluent concentration increased to 90 ppm and fluctuated between 80 and 90 ppm for the duration of the test which was terminated after approximately 2 hours as the influent concentrations also remained relatively stable.

The flow rate was determined by measuring the time for a 30 gallon bag to be filled with air at the effluent stack. Based upon the field measurements, the bag was repeatedly filled in approximately four (4) seconds. Thirty (30) gallons is approximately equivalent to four (4) cubic feet (ft^3). Therefore the flowrate would be 1 ft^3 per second or sixty (60) ft^3 /minute (60 SCFM). These data are summarized in Table IV. The estimated hydrocarbon removal rate during the SVE test was approximately 0.12 lb/hr.

At approximately 90 minutes into the vacuum extraction test, a tedlar air bag sample was collected from the influent air stream and analyzed for BTEX, MTBE and $C_2 - C_{10}$ hydrocarbons.

The Tedlar air bag sample retrieved from the soil gas stream extracted from OW 1 on 16 May 2000 was reported as containing: 34 mg/m^3 BTEX, reported as <3 mg/m^3 benzene, <4 mg/m^3 toluene, <5 mg/m^3 ethylbenzene and 34 mg/m^3 total xylenes, 45 mg/m^3 MTBE and 400 mg/m^3 C_2-C_{10} hydrocarbons (as propane). A copy of the laboratory analytical report is attached as Appendix D. Based upon the corresponding soil gas flow rate of 60 scfm, a hydrocarbon removal rate of approximately 0.09 lb./hr C_2-C_{10}, approximately 0.0076 lb/hr BTEX, and approximately 0.01 lb/hr MTBE was achieved via soil vapor extraction with simultaneous groundwater pumping from OW 1. These estimated hydrocarbon removal rates are presented in Table V.

In addition to recording vacuum readings at the vacuum extraction well, OW 1, vacuum readings were also measured at the observation wells OWs 2, 3 and 4 at regular time intervals to determine the radius of influence, between wells across the site.

During the 2 hours of the vacuum extraction test, no vacuum response was recorded in OWs 2 and 3, which are located approximately 110 feet from OW 1. After approximately 30 minutes, a vacuum response of 0.04" H_2O was measured in OW 4, which is located approximately 65 feet from OW 1. The vacuum response remained stable at 0.04" H_2O or the first 60 minutes of the test, decreased to 0.02" H_2O at 90 minutes and subsequently increased to 0.06" H_2O at 120 minutes. These results are summarized in Table VI.

IV SUMMARY AND DISCUSSION:

Mulry and Cresswell Environmental, Inc. (MCE) conducted a groundwater pumping and soil vapor extraction test at the Sunoco Service Station located at 2899 Holme Avenue, Philadelphia, Pennsylvania in May 2000.

During the pumping test, approximately 173 gallons of groundwater were removed from OW 1 during the 480 minutes (8 hours) of the pump test, at an average flowrate of approximately 0.36 gpm.

A maximum drawdown of 2.21 feet was achieved in OW 1, the pumping well, during the eight hours of pumping. No drawdown responses were measured in the observation wells (OWs 2, 3 and 4) during the 8 hours of pumping. Average aquifer parameters were calculated as $T=0.0135\ ft^2/min$; $K_s=2.7x10^{-4}$ ft/min.

For approximately 120 minutes of the pumping test, soil vapor extraction was conducted on OW 1 simultaneously with continued pumping at a rate of approximately 0.33 to 0.36 gpm. The soil vapor flow rate was calculated as approximately 60 scfm. PID readings on the extracted soil gas influent indicated hydrocarbon concentrations of approximately 150 to 160 ppm. A Tedlar bag soil gas sample retrieved from the extracted soil gas influent stream and submitted to the laboratory for analysis and was reported as containing: 34 mg/m^3 BTEX, reported as <3 mg/m^3 benzene, <4 mg/m^3 toluene, <5 mg/m^3 ethylbenzene and 34 mg/m^3 total xylenes, 45 mg/m^3 MTBE and 400 mg/m^3 C_2-C_{10} hydrocarbons (as propane).

Vacuum communication was measured at between 0.02 and 0.06 inches H_2O in OW 4, located approximately 65 feet to the northeast of the vapor extraction well, OW 1. No response to vacuum was measured in OWs 2 and 3, located approximately 110 feet east and northeast, respectively, of OW 1.

While the influence of pumping and soil vapor extraction on the subsurface appears to be spatially limited, groundwater quality data obtained during future quarterly sampling events will be evaluated to determine the need for and feasibility of either a stationary remediation system or periodic "hot spot" remediation efforts.

Table III: Pump Test Effluent and Influent Results - Pumping Well OW 1
BTEX, MTBE, Naphthalene, Isopropylbenzene (Cumene) in ug/l, Oil & Grease (O&G) in mg/l
Sunoco Service Station (Duns # 0005-1078)
2899 Holme Avenue, Philadelphia, PA

Effluent OW 2

Date	Benzene	Toluene	Ethylbenzene	Total Xylenes	Total BTEX	MTBE	Naphthalene	Isopropylbenzene	Oil & Grease
16-May-00	BDL	BDL	BDL	BDL	BDL	-	-	-	BDL

Influent OW 2

Date	Benzene	Toluene	Ethylbenzene	Total Xylenes	Total BTEX	MTBE	Naphthalene	Isopropylbenzene	Oil & Grease
16-May-00	120	19	67	6500	6706	100	140	19	-

"-" = compound not analyzed
BDL = Below Method Detection Limit

Effluent samples were analyzed for BTEX by method 8021B and for oil and grease (O&G) by EPA method 1664

Influent samples were analyzed for BTEX, MTBE, Naphthalene and Isopropylbenzene by method 8260A.

MULRY AND CRESSWELL ENVIRONMENTAL, INC.

Table IV: Combined Vapor Extraction/Groundwater Pumping Test

Sunoco Service Station (0005-1078), 2899 Holme Avenue, Philadelphia, PA

Vapor Extraction Test on OW 1

16 May 2000

Rotron regenerative blower, Model DR 454

Pumping rate of the simultaneous groundwater pumping test fluctuated between approximately 0.43 - 0.33 gpm (for the entire test)

Influent air sample was collected at 16:50 for laboratory analysis

Estimated Hydrocarbon Removal Based on Gastech-measurements of Extracted Soil Vapor:

Elapsed Time (min)	Vacuum (Inches H_20)	SCFM	Influent ppm	estimated lb./hr
5	39	60	160	-
15	39	60	160	0.13
30	39	60	160	0.13
30	43	-	130	0.11
45	39	60	150	0.12
60	39	60	160	0.13
90	39	60	150	0.12
120	39	60	150	0.12

Conversion of Gastech field readings (ppm) to lb. hydrocarbons:

87g (avg. mol weight hydrocarbons)	"x" ppm reading	scfm	0.077 lb. (weight of air)	60 min
29g (avg. mol weight air)	1,000,000 air	min	cubic ft. (per volume of air)	1 hour

SCFM data calculated by measuring the time to fill a bag of known volume (30 gallons) with air.

MULRY AND CRESSWELL ENVIRONMENTAL, INC.

Table V: Estimated Hydrocarbon Removal Based on Laboratory Analytical Results for Extracted Soil Vapor:
Sunoco Service Station (0005-1078), 2899 Holme Avenue, Philadelphia, PA

For OW 1 influent sample, C_2- C_{10} Hydrocarbons, 16 May 2000, 16:50:

400 mg C_2-C_{10} Hydrocarbons	1 lb.	60 scf	60 min	0.028317 m^3	0.0899 lb. C_2-C_{10}
m^3	453,590 mg	min	hour	scf	hour

For OW 1 influent sample, total BTEX, 16 May 2000, 16:50:

34 total BTEX	1 lb.	60 scf	60 min	0.028317 m^3	0.0076 lb. total BTEX
m^3	453,590 mg	min	hour	scf	hour

For OW 1 influent sample, MTBE, 16 May 2000, 16:50:

45 mg MTBE	1 lb.	60 scf	60 min	0.028317 m^3	0.0101 lb. MTBE
m^3	453,590 mg	min	hour	scf	hour

Conversion of laboratory analytical results in mg/m^3 to lb./hour:

"x" mg C_2-C_{10} Hydrocarbons	1g x 1 lb.	scf	60 min	0.028317 m^3	= lb. C_2-C_{10} hydrocarbons
1 m^3 air	1000 mg x 453.59 g	min	hour	scf	hour

conversion for bag-airflow measurements to vacuum, scfm, m^3/min:
(x gal / x sec) x (60 sec / min) x (3.785 l / 1 US gal) x (1 m^3 / 1000 l)

Table VI: Vacuum Readings in Surrounding Observation Wells
Combined Vapor Extraction/Groundwater Pumping Test on OW 1
Sunoco Service Station (0005-1078) 2899 Holme Avenue, Philadelphia, PA

Elapsed Time (min)	OW 2	OW 3	OW 4
	"H_2O Vacuum	"H_2O Vacuum	"H_2O Vacuum
0	-	-	-

COPIES OF LETTERS OF APPROVAL

CITY OF PHILADELPHIA

WATER DEPARTMENT
ARA Tower at Reading Center
1101 Market Street

KUMAR KISHINCHAND, P.E
WATER COMMISSIONER

May 2, 2000

Mr. John Zatyczyc
Mulrey & Cresswell Environmental, Inc
1691 Horseshoe Pike
Manor Professional Bldg. Suite 1
Glenmore, PA 19343

Re: **Sunoco Station**
2899 Holme Ave.

Dear John Zatyczyc:

The Water Department has reviewed your April 26, 2000 letter requesting permission to discharge pretreated groundwater from a pump test at the above location to the City's sanitary sewer system. Approval is hereby granted provided the following conditions are met.

- o BTEX ≤ 40 PPM.
- o SGT-HEM (non-polar O&G by EPA method 1664) < 100 PPM
- o No floating layer or visible sheen is present.
- o Not to exceed 10% of the lower explosive limit at the point of discharge.
- o Extreme caution must be exercised to ensure the discharge is to the sanitary sewer as discharges to the storm sewer are prohibited.
- o Exceedances of permitted limits should be reported pursuant to Section 3.3.7 of the City's Wastewater Control Regulations.
- o Flow readings and analytical data are provided to this office along with a check for the volume of groundwater discharged at the current rate ($4.59/1000 cf as of May, 00).
- o In the event that an ongoing remediation discharge will occur, a permit will be required

This permit expires 45 days from the date of this letter or at the end of the project, whichever occurs first.
Please feel free to contact me at 215-685-4910 or Mr. Lonnie Goldiner at 215-685-6239, if you have any questions relating to this matter.

Sincerely,

Keith D. Houck
Assistant Manager
Industrial Waste Unit

RE: Eight-hour temporary Vapor Extraction test, at the Sunoco Station (DUNS #0005-1078) 2899 Holme Avenue.

Dear Mr. Zatyczyc:

This letter is in response to your letter dated April 26, 2000. Air Management Services hereby approves your request to conduct a one-time, eight hour temporary Vapor Extraction test at the Sunoco Station (DUNS #0005-1078) 2899 Holme Avenue.

If you have any questions, please call me at (215) 685-7572.

Jill Janson

Work Order Comments

Containers are unbroken.
Sample labels/COC agree.
Samples preserved properly.
Samples Received at 0°C

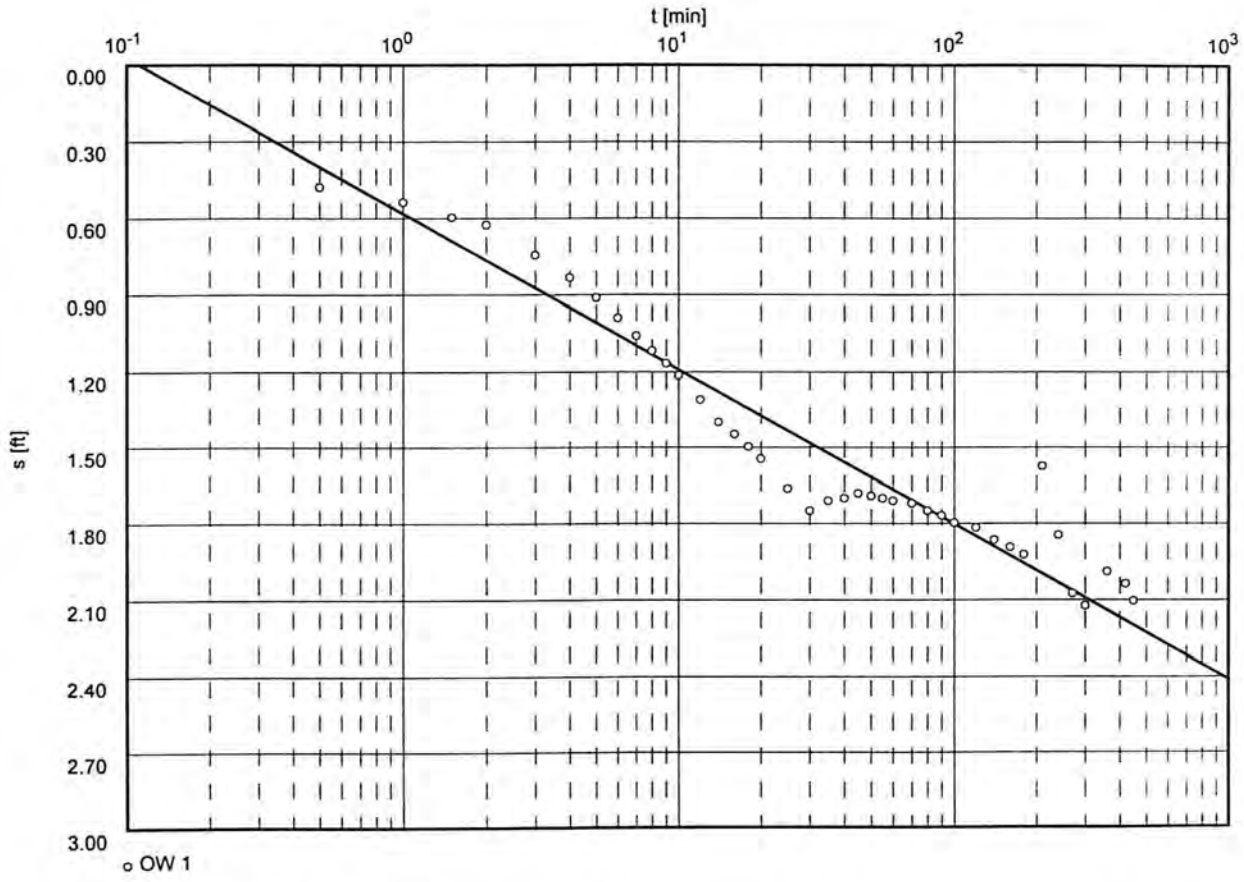
PUMP TEST RESULTS

Mulry & Cresswell Environmental, Inc. 1691 Horseshoe Pike, Manor Prof. Bldg., Suite 1 Glenmoore, PA 19343	Pumping test analysis Time-Drawdown-method after COOPER & JACOB Unconfined aquifer	Date: 07.06.2000	Page 1
		Project: 2899 Holme Avenue	
		Evaluated by: JMZ	

Pumping Test No.	Test conducted on: 16 May 2000
OW 1	
Discharge 0.36 U.S.gal/min	



Transmissivity [ft²/min]: 1.45×10^{-2}

Hydraulic conductivity [ft/min]: 2.91×10^{-4}

Aquifer thickness [ft]: 50.00

BILLING ... All fees are charged or billed directly to the client. The billing of a third party will not be accepted without a statement, signed by the third party, which acknowledges and accepts payment responsibilty.

The paperwork submitted with your samples will be assumed to describe the testing protocol you desire. Any changes to this protocol must be submitted to LLI in writing. If testing is already in progress, you will be billed. (Our FAX number is 717-656-2681. Send changes to: Client Services - URGENT!)

Lancaster Laboratories reserves the right to amend this acknowledgement if the sample(s) as received require additional preparation charges.
